Industry Foundation Classes (IFC) za izmenjavo podatkov na področju gradbeništva in upravljanja objektov - 1. del: Shema podatkov (ISO 16739-1:2018) - Opomba: CD-ROM

Industry Foundation Classes (IFC) for data sharing in the construction and facility management industries - Part 1: Data schema (ISO 16739-1:2018)

Osnova: EN ISO 16739-1:2020

ICS: 35.240.67, 25.040.40

The Industry Foundation Classes, IFC, are an open international standard for Building Information Model (BIM) data that are exchanged and shared among software applications used by the various participants in the construction or facility management industry sector. The standard includes definitions that cover data required for buildings over their life cycle. This release, and upcoming releases, extend the scope to include data definitions for infrastructure assets over their life cycle as well. The Industry Foundation Classes specify a data schema and an exchange file format structure. The data schema is defined in

- EXPRESS data specification language, defined in ISO 10303-11,
- XML Schema definition language (XSD), defined in XML Schema W3C Recommendation, whereas the EXPRESS schema definition is the source and the XML schema definition is generated from the EXPRESS schema according to the mapping rules defined in ISO 10303-28. The exchange file formats for exchanging and sharing data according to the conceptual schema are
- Clear text encoding of the exchange structure, defined in ISO 10303-21,
- Extensible Markup Language (XML), defined in XML W3C Recommendation.

Alternative exchange file formats may be used if they conform to the data schemas.

ISO 16739-1:2017 of IFC consists of the data schemas, represented as an EXPRESS schema and an XML schema, and reference data, represented as definitions of property and quantity names, and formal and informative descriptions.

A subset of the data schema and referenced data is referred to as a Model View Definition (MVD). A particular MVD is defined to support one or many recognized workflows in the construction and facility management industry sector. Each workflow identifies data exchange requirements for software applications. Conforming software applications need to identify the model view definition they conform to.

Informacijsko modeliranje gradenj in drugi digitalni procesi v gradbeništvu - Metodologija za opisovanje, vzpostavitev in vzdrževanje atributov v medsebojno povezanih podatkovnih slovarjih (ISO 23386:2020)

Building information modelling and other digital processes used in construction - Methodology to describe, author and maintain properties in interconnected data dictionaries (ISO 23386:2020)

Osnova: EN ISO 23386:2020

ICS: 91.010.01, 35.240.67

This European standard establishes the rules for defining properties used in construction and a methodology for authoring and maintaining them, for a confident and seamless digital share between stakeholders.

Regarding definition of properties, it provides:

- rules of definitions of properties
- definition of property's attributes

Regarding authoring and maintaining process, it provides:

- definition of request's attributes
- definition and role of experts;
- a governance model through the establishment of steering committee;
- management rules to interconnect dictionaries through properties mapping process.

Ugotavljanje obstojnosti izolacijskih materialov pri puščanju v kriogenem območju - 2. del:

Izpostavljenost pari (ISO 20088-2:2020)

Determination of the resistance to cryogenic spill of insulation materials - Part 2: Vapour exposure (ISO 20088-2:2020)

Osnova: EN ISO 20088-2:2020

ICS: 75.200

This part of ISO 20088 describes a method for determining the resistance to cryogenic spray on Cryogenic Spillage Protection (CSP) systems. It is applicable where CSP systems are installed on carbon steel and will be in contact with cryogenic fluids. Liquid jet release is potentially formed at high pressure LNG handling section in LNG liquefaction unit, e.g., around 40 - 60 bar operating pressure. Due to high velocity discharge, it may cause severe condition for cryogenic protection coating by large momentum with extreme cryogenic temperature. Liquid nitrogen is used as the cryogenic medium since it has a lower boiling point than liquid natural gas or liquid oxygen and it is not flammable. Additionally, it can be safely used for experiment. Part 2 of the standard covers vapour phase exposure conditions. The test laboratory is responsible to conduct an appropriate risk assessment according to local regulation in order to consider the impact of liquid and gaseous nitrogen exposure to equipment and personnel.

Delo pod napetostjo - Oblačila za zaščito pred temperaturno nevarnostjo električnega obloka - 2. del:
Zahteve

Live working - Protective clothing against the thermal hazards of an electric arc - Part 2: Requirements

Osnova: EN 61482-2:2020

ICS: 13.260, 13.340.10

IEC 61482-2 is applicable to protective clothing used in work where there is the risk of exposure to an electric arc hazard. This document specifies requirements and test methods applicable to materials and garments for protective clothing for electrical workers against the thermal hazards of an electric arc. Electric shock hazard is not covered by this document, which is applicable in combination with standards covering such hazards. Other effects than the thermal effects of an electric arc like noise, light emissions, pressure rise, hot oil, electric shock, the consequences of physical and mental shock or toxic influences are not covered by this document. Protection of eyes, face, head, hands and feet against electric arc hazard is not covered by this document.

2020-06 (po) (en;fr) 42 str. (I)

Splošne zahteve za stanovanske in stavbne elektronske sisteme (HBES) in sisteme za avtomatizacijo in krmiljenje stavb (BACS) - 11. del: Inteligentno merjenje - Aplikacijske specifikacije - Preprost zunanji prikazovalnik za uporabnika - Dopolnilo A1

General requirements for Home and Building Electronic Systems (HBES) and Building Automation and Control Systems (BACS) - Part 11: Smart Metering - Application Specifications - Simple External Consumer Display

Osnova: EN 50491-11:2015/A1:2020

ICS: 35.240.67, 97.120

Dopolnilo A1:2020 je dodatek k standardu SIST EN 50491-11:2015.

Ta evropski standard določa podatkovni model za prenos podatkov merilnikov na preprost zunanji prikazovalnik za uporabnika. Podatkovni model, kot je opisan na podlagi funkcionalnih blokov, zajetih v tem evropskem standardu, določa obliko meritvenih podatkov, ki so dostopni prek preprostega zunanjega prikazovalnika za uporabnika. Ta podatkovni vmesnik je navadno del funkcij za komunikacijo z merilniki in se do njega dostopa s preprostim zunanjim prikazovalnikom za uporabnika prek vmesnika H1 TR 50572 med prikazovalnikom in funkcijami za komunikacijo z merilniki.

Do podatkovnega vmesnika v tem dokumentu se lahko dostopa tudi z LNAP ali NNAP prek vmesnika C ali M, nakar se lahko do podatkov dostopa z napravami HBES prek vmesnikov H2 in H3.

Tako se lahko isti podatkovni model uporablja tako na vmesniku H1 kot na vmesnikih H2 in H3.

Dokument ne določa mehanizmov za komunikacijo, ki se uporablja na podatkovnem vmesniku, niti uporabljenih mehanizmov za zasebnost podatkov in varnost, kjer se za te primere uporablja nacionalni predpisi.

Prav tako dokument ne določa komunikacijskih protokolov, ki se uporablja med merilniki in funkcijami za komunikacijo z merilniki. Kljub temu upošteva obstoječe evropske standarde za opredelitev podatkovnega modela, kot na primer skupine standardov EN 13757 in EN 62056.

ICS: 35.110

This EN specifies the so-called Cooling Efficiency Ratio (CER), which is a key performance indicator for data centres, that indicates the effectiveness of a cooling system in a data centre.

SIST IEC 60479-1:2020

2020-06 (po) (en) 72 str. (L)

Vplivi električnega toka na ljudi in živali - 1. del: Splošno

Effects of current on human beings and livestock - Part 1: General aspects

Osnova:

ICS: 29.020, 13.200

IEC 60479-1 provides basic guidance on the effects of shock current on human beings and livestock. For a given current path through the human body, the danger to persons depends mainly on the

magnitude and duration of the current flow. However, the time/current zones specified in the following clauses are, in many cases, not directly applicable in practice for designing measures of protection against electrical shock. The necessary criterion is the admissible limit of touch voltage (i.e. the product of the current through the body called touch current and the body impedance) as a function of time. The relationship between current and voltage is not linear because the impedance of the human body varies with the touch voltage, and data on this relationship is therefore required. The different parts of the human body (such as the skin, blood, muscles, other tissues and joints) present to the electric current a certain impedance composed of resistive and capacitive components. The values of body impedance depend on a number of factors and, in particular, on current path, on touch voltage, duration of current flow, frequency, degree of moisture of the skin, surface area of contact, pressure exerted and temperature. The impedance values indicated in this document result from a close examination of the experimental results available from measurements carried out principally on corpses and on some living persons. Knowledge of the effects of alternating current is primarily based on the findings related to the effects of current at frequencies of 50 Hz or 60 Hz which are the most common in electrical installations. The values given are, however, deemed applicable over the frequency range from 15 Hz to 100 Hz, threshold values at the limits of this range being higher than those at 50 Hz or 60 Hz. Principally the risk of ventricular fibrillation is considered to be the main mechanism of death of fatal electrical accidents. Accidents with direct current are much less frequent than would be expected from the number of DC applications, and fatal electrical accidents occur only under very unfavourable conditions, for example, in mines. This is partly due to the fact that with direct current, the letgo of parts gripped is less difficult and that for shock durations longer than the period of the cardiac cycle, the threshold of ventricular fibrillation is considerably higher than for alternating current. This basic safety publication is primarily intended for use by technical committees in the preparation of standards in accordance with the principles laid down in IEC Guide 104 and ISO/IEC Guide 51. It is not intended for use by manufacturers or certification bodies. One of the responsibilities of a technical committee is, wherever applicable, to make use of basic safety publications in the preparation of its publications. The requirements, test methods or test conditions of this basic safety publication will not apply unless specifically referred to or included in the relevant publications.

SIST IEC 60479-2:2020

2020-06 (po) (en) 56 str. (J)

Vplivi električnega toka na ljudi in živali – 2. del: Posebnosti

Effects of current on human beings and livestock - Part 2: Special aspects

Osnova:

ICS: 29.020, 13.200

IEC 60479-2 describes the effects on the human body when a sinusoidal alternating current in the frequency range above 100 Hz passes through it. The effects of current passing through the human body for: - alternating sinusoidal current with DC components, - alternating sinusoidal current with phase control, and - alternating sinusoidal current with multicycle control are given but are only deemed applicable for alternating current frequencies from 15 Hz up to 100 Hz. Means of extending the frequency of applicability of pure sinusoids to a frequency of 150 kHz are given, supplementing the data in IEC 60479-1. Means of examining random complex irregular waveforms are given. This document describes the effects of current passing through the human body in the form of single and multiple successive unidirectional rectangular impulses, sinusoidal impulses and impulses resulting from capacitor discharges. The values specified are deemed to be applicable for impulse durations from 0,1 ms up to and including 10 ms. This document only considers conducted current resulting from the direct application of a source of current to the body, as does IEC 60479-1. It does not consider current induced within the body caused by its exposure to an external electromagnetic field. This basic safety publication is primarily intended for use by technical committees in the preparation of standards in accordance with the principles laid down in IEC Guide 104 and ISO/IEC Guide 51. It is not intended for use by manufacturers or certification bodies. One of the responsibilities of a technical committee is, wherever applicable, to make use of basic safety publications in the preparation of its publications. The requirements, test methods or test conditions of this basic safety publication will not apply unless specifically referred to or included in the relevant publications.

Vplivi električnega toka na ljudi in živali – 4. del: Vplivi udarov strele

Effects of current on human beings and livestock - Part 4: Effects of lightning strokes

Osnova:

ICS: 29.020, 13.200

IEC TR 60479-4:2020 (E) summarizes the basic parameters for lightning and its variability insofar as they apply to human beings and livestock.

The possible direct and indirect interactions of strikes with bodies of living beings are indicated. The resulting effects caused by lightning currents for the organism are described.

This document shows the differences of effects on human beings and livestock due to lightning strokes versus those effects of electric shocks derived from electrical systems.

This third edition cancels and replaces the second edition published in 2011. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) lightning occurrence and climatory effects around the world are depicted;
- b) direct strike description is extended;
- c) step voltage effects are expanded;
- d) upward streamer explanation is enhanced;
- e) other direct or indirect related effects to lightning injuries to the human body are specified;
- f) various safety procedures and related possibilities with respect to the personal danger of lightning are presented.

ICS: 97.040.30

EN-IEC 62552-1 specifies the essential characteristics of household refrigerating appliances, cooled by internal natural convection or forced air circulation, and establishes test methods for checking the characteristics. For the purposes of declaration, the tests defined in this part of IEC 62552 are considered to be type tests to assess the fundamental design and operation of a refrigerating appliance. This part of IEC 62552 does not define requirements for production sampling or conformity assessment or certification. This part of IEC 62552 does not define a regime for verification testing as this varies by region and country. When verification of the performance of a refrigerating appliance of a given type in relation to this standard is necessary, it is preferable, wherever practicable, that all the tests specified be applied to a single unit. The tests can also be made individually for the study of a particular characteristic.

SIST EN 62552-2:2020**2020-06****(po)****(en)**

SIST EN 62552:2015

61 str. (K)

Gospodinjski hladilni aparati - Značilnosti in preskusne metode - 2. del: Zahtevane lastnosti
Household refrigerating appliances - Characteristics and test methods - Part 2: Performance requirements

Osnova: EN 62552-2:2020

ICS: 97.040.30

EN-IEC 62552-2 specifies the essential characteristics of household refrigerating appliances cooled by internal natural convection or forced air circulation, and specifies test methods for checking the characteristics. This part of IEC 62552 describes the methods for the determination of performance requirements. Although there is some commonality in the set-ups for different tests (and so it may be an advantage to apply them all to one sample), these are separate tests to evaluate specific characteristics of the sample being tested. This part of IEC 62552 does not specify a procedure to generalise the results from sample test results to a prediction of the characteristics of the whole population from which that sample was selected.

Gospodinjski hladilni aparati - Značilnosti in preskusne metode - 3. del: Poraba energije in prostornina
Household refrigerating appliances - Characteristics and test methods - Part 3: Energy consumption and volume

Osnova: EN 62552-3:2020

ICS: 97.040.30

EN-IEC 62552-3 specifies the essential characteristics of household and similar refrigerating appliances cooled by internal natural convection or forced air circulation, and establishes test methods for checking these characteristics. This part of IEC 62552 describes the methods for the determination of energy consumption characteristics and defines how these can be assembled to estimate energy consumption under different usage and climate conditions. This part of IEC 62552 also defines the determination of volume.

Dopolnilo A11:2020 je dodatek k standardu SIST EN IEC 60704-2-16:2019.

Te posebne zahteve se uporablajo za posamezne električne pralno-sušilne stroje za gospodinjske in podobne namene, namenjene namestitvi na tla ob steno, vgradnji ali postavitvi pod pult, kuhinjsko delovno površino ali umivalnik, namestitvi na steno ali na pult.

SIST/TC GIG Geografske informacije

SIST EN ISO 19111:2020

SIST EN ISO 19111:2008
SIST EN ISO 19111-2:2012

2020-06 (po) (en;fr;de) 154 str. (P)
Geografske informacije - Lociranje s koordinatami (ISO 19111:2019)
Geographic information - Referencing by coordinates (ISO 19111:2019)
Osnova: EN ISO 19111:2020
ICS: 07.040, 35.240.70

This document defines the conceptual schema for the description of referencing by coordinates. It describes the minimum data required to define coordinate reference systems. This document supports the definition of:

- spatial coordinate reference systems where coordinate values do not change with time. The system may:
 - be geodetic and apply on a national or regional basis, or
 - apply locally such as for a building or construction site, or
 - apply locally to an image or image sensor;
- be referenced to a moving platform such as a car, a ship, an aircraft or a spacecraft. Such a coordinate reference system can be related to a second coordinate reference system which is referenced to the Earth through a transformation that includes a time element;
- spatial coordinate reference systems in which coordinate values of points on or near the surface of the earth change with time due to tectonic plate motion or other crustal deformation. Such dynamic systems include time evolution, however they remain spatial in nature;
- parametric coordinate reference systems which use a non-spatial parameter that varies monotonically with height or depth;
- temporal coordinate reference systems which use dateTime, temporal count or temporal measure quantities that vary monotonically with time;
- mixed spatial, parametric or temporal coordinate reference systems.

The definition of a coordinate reference system does not change with time, although in some cases some of the defining parameters can include a rate of change of the parameter. The coordinate values within a dynamic and in a temporal coordinate reference system can change with time.

This document also describes the conceptual schema for defining the information required to describe operations that change coordinate values.

In addition to the minimum data required for the definition of the coordinate reference system or coordinate operation, the conceptual schema allows additional descriptive information - coordinate reference system metadata - to be provided.

This document is applicable to producers and users of geographic information. Although it is applicable to digital geographic data, the principles described in this document can be extended to many other forms of spatial data such as maps, charts and text documents.

Geografske informacije - Jezik za označevanje geografskih podatkov (GML) - 1. del: Osnove (ISO 19136-1:2020)
Geographic information - Geography Markup Language (GML) - Part 1: Fundamentals (ISO 19136-1:2020)
Osnova: EN ISO 19136-1:2020
ICS: 07.040, 35.060, 35.240.70

EN-ISO 19136-1 is an XML encoding in accordance with ISO 19118 for the transport and storage of geographic information modelled in accordance with the conceptual modelling framework used in the ISO 19100 series of International Standards and including both the spatial and non-spatial properties of geographic features. This document defines the XML Schema syntax, mechanisms and conventions that provide an open, vendor-neutral framework for the description of geospatial application schemas for the

transport and storage of geographic information in XML;- allow profiles that support proper subsets of GML framework descriptive capabilities;- support the description of geospatial application schemas for specialized domains and information communities;- enable the creation and maintenance of linked geographic application schemas and datasets;- support the storage and transport of application schemas and datasets;- increase the ability of organizations to share geographic application schemas and the information they describe.Implementers can decide to store geographic application schemas and information in GML, or they can decide to convert from some other storage format on demand and use GML only for schema and data transport.

SIST/TC IEHT Elektrotehnika - Hidravlične turbine

SIST EN 61400-12-1:2017/AC:2020

2020-06 (po) (en) 3 str. (AC)

Sistemi za proizvodnjo energije na veter - 12-1. del: Preskušanje zmogljivosti vetrnih turbin za proizvodnjo električne energije - Popravek AC (IEC 61400-12-1:2017/COR2:2020)

Wind energy generation systems - Part 12-1: Power performance measurements of electricity producing wind turbines (IEC 61400-12-1:2017/COR2:2020)

Osnova: EN 61400-12-1:2017/AC:2020-04

ICS: 27.180

Popravek k standardu SIST EN 61400-12-1:2017.

Ta del standarda IEC 61400 določa postopek za merjenje elektroenergetskih zmogljivosti posamezne vetrne turbine in se uporablja za preskušanje turbin vseh vrst in velikosti, ki so priključene na električno omrežje. Poleg tega ta standard opisuje postopek, ki se uporablja za določanje elektroenergetske zmogljivosti majhnih vetrnih turbin (kot določa standard IEC 61400-2), kadar so priključene na električno omrežje ali akumulatorje. Postopek se lahko uporabi za vrednotenje zmogljivosti določenih vetrnih turbin na določenih lokacijah, vendar se lahko metodologija prav tako uporabi za splošne primerjave med različnimi modeli ali nastavitevami vetrnih turbin., kadar se upoštevajo pogoji glede na lokacijo in vplivi filtriranja podatkov.

Elektroenergetska zmogljivost vetrnih turbin določata izmerjena krivulja električne energije in ocenjena letna proizvodnja energije (AEP). Izmerjena krivulja električne energije, opredeljena kor razmerje med hitrostjo vetra in izhodno močjo vetrne turbine, se določi z zbiranjem istočasnih meritev meteoroloških spremenljivk (vključno s hitrostjo vetra) in signalov vetrne turbine (vključno z izhodno močjo) na mestu preskušanja v obdobju, ki je dovolj dolgo, da se ustvari statistično pomembna zbirka podatkov pri različnih hitrostih vetra in pri različnih vetrnih in atmosferskih pogojih. AEP se izračuna z uporabo izmerjene krivulje električne energije pri referenčnih porazdelitvah frekvence hitrosti vetra, pri čemer se predvideva 100-odstotna razpoložljivost.

Ta dokument opisuje merilno metodologijo, pri kateri je treba vrednosti izmerjene krivulje električne energije in pridobljene proizvodnje energije nadomestiti z oceno virov netočnosti in njihovimi skupnimi vplivi.

ICS: 45.060.01, 13.220.40, 29.060.20

EN 50306-4 specifies requirements for, and constructions and dimensions of, multicore and multipair cables rated voltage U₀/U: 300/500 V, of the following types:

- unscreened, sheathed for either exposed or protected wiring, 0,5 mm² to 2,5 mm², number of cores from 2 to 48;
- screened, sheathed for either exposed or protected wiring, 0,5 mm² to 2,5 mm², number of cores from 2 to 8;
- unscreened, sheathed for either exposed or protected wiring, 0,5 mm² to 1,5 mm², number of screened pairs of cores from 2 to 7;
- screened, sheathed for either exposed or protected wiring, 0,5 mm² to 1,5 mm², number of unscreened pairs of cores from 2 to 7.

SIST/TC IEMO Električna oprema v medicinski praksi

SIST EN 60601-2-43:2010/A2:2020

2020-06 (po) (en) 20 str. (E)

Medicinska električna oprema - 2-43. del: Posebne zahteve za osnovno varnost in bistvene lastnosti rentgenske opreme za interventne postopke - Dopolnilo A2 (IEC 60601-2-43:2010/A2:2019)

Medical electrical equipment - Part 2-43: Particular requirements for the basic safety and essential performance of X-ray equipment for interventional procedures (IEC 60601-2-43:2010/A2:2019)

Osnova: EN 60601-2-43:2010/A2:2020

ICS: 13.280, 11.040.50

Dopolnilo A2:2020 je dodatek k standardu SIST EN 60601-2-43:2010.

Ta mednarodni standard velja za OSNOVNO VARNOST in BISTVENE LASTNOSTI RENGENTSKE OPREME, za katero PROIZVAJALEC navaja, da je primerna za RADIOSKOPSKO VODENE INTERVENTNE POSTOPKE, v nadaljevanju INTERVENTNE RENTGENSKE OPREME. Njeno področje uporabe izključuje zlasti: - opremo za RADIOTERAPIJO; opremo za RAČUNALNIŠKO TOMOGRAFIJO; - DODATKE, ki so namenjeni vstaviti v PACIENTA; MAMOGRAFSKO OPREMO; zobno RENTGENSKO OPREMO. INTERVENCIJSKA RENTGENSKA OPREMA, za katero PROIZVAJALEC navaja, da je primerna za RADIOSKOPSKO VODENE INTERVENCIJSKE POSTOPKE, ki ne vključuje PODPORE PACIENTU kot del sistema, je izvzeta iz določb tega standarda. Če je klavzula ali podklavzula izrecno namenjena samo za uporabo za INTERVENCIJSKO RENGENTSKO OPREMO ali samo za ME SISTEME, bosta naslov in vsebina te klavzule ali podklavzule to tudi navedla. V nasprotnem primeru, tako klavzula ali podklavzula veljata za ustrezno INTERVENCIJSKO RENTGENSKO OPREMO in ME SISTEME.

SIST EN 60601-2-65:2013/A1:2020

2020-06 (po) (en) 8 str. (B)

Medicinska električna oprema - 2-65. del: Posebne zahteve za osnovno varnost in bistvene lastnosti za intraoralni zobni rentgen - Dopolnilo A1 (IEC 60601-2-65:2012/A1:2017)

Medical electrical equipment - Part 2-65: Particular requirements for the basic safety and essential performance of dental intra-oral X-ray equipment (IEC 60601-2-65:2012/A1:2017)

Osnova: EN 60601-2-65:2013/A1:2020

ICS: 11.060.20, 13.280

Dopolnilo A1:2020 je dodatek k standardu SIST EN 60601-2-65:2013.

Ta mednarodni standard se uporablja za OSNOVNO VARNOST in BISTVENE LASTNOSTI INTRAORALNEGA ZOBNEGA RENTGENA in njegovih glavnih sestavnih delov, v nadaljevanju: MEDICINSKA ELEKTRIČNA OPREMA. Področje uporabe tega standarda je omejeno na OPREMO ZA RENTGEN, kjer SESTAV RENTGENSKE CEVI vsebuje VISOKONAPETOSTNI SESTAV TRANSFORMATORJA. EKSTRAORALNI ZOBNI RENTGENI so izključeni s področja uporabe tega standarda. MEDICINSKA ELEKTRIČNA OPREMA in MEDICINSKI ELEKTRIČNI SISTEMI na področju uporabe standardov IEC 60601-2-63, IEC 60601-2-44, IEC 60601-2-54, IEC 60601-2-45 ali IEC 60601-2-43 so izključeni s področja uporabe tega standarda. Področje uporabe tega mednarodnega standarda izključuje tudi RADIOTERAPEVTSKE SIMULATORJE in opremo za denzitometrijo absorpcije kosti ali tkiva. Ta standard tudi ne vključuje MEDICINSKE ELEKTRIČNE OPREME, ki je namenjena ZOBNI

RADIOSKOPIJI. Na določenem področju uporabe imajo členi tega standarda prednost in nadomeščajo tiste iz standarda IEC 60601-2-7, Medicinska električna oprema - Posebne zahteve za varnost visokonapetostnih generatorjev diagnostičnih rentgenskih generatorjev, in standarda IEC 60601-2-32, Medicinska električna oprema - Posebne zahteve za varnost opreme, ki je povezana z rentgensko opremo. Vse zahteve glede integrirane SESTAVE RENTGENSKIH CEVI so opredeljene v okviru tega standarda. Torej IEC 60601-2-28 ne velja za MEDICINSKO ELEKTRIČNO OPREMO na področju tega mednarodnega standarda.

SIST EN IEC 60580:202 SIST EN 60580:2002

2020-06 (po) (en) 58 str. (H)

Medicinska električna oprema - Merilniki produkta površina-doza (IEC 60580:2019)

Medical electrical equipment - Dose area product meters (IEC 60580:2019)

Osnova: EN IEC 60580:2020

ICS: 17.240, 11.040.50

EN-IEC 60580 specifies the performance and testing of DOSE AREA PRODUCT METERS intended to measure DOSE AREA PRODUCT and/or DOSE AREA PRODUCT RATE to which the PATIENT is exposed during MEDICAL RADIOLOGICAL EXAMINATIONS. This document is applicable to the following types of DOSE AREA PRODUCT METERS: a) FIELD-CLASS DOSE AREA PRODUCT METERS normally used for the measurement of DOSE AREA PRODUCTS during MEDICAL RADIOLOGICAL EXAMINATIONS; b) REFERENCE-CLASS DOSE AREA PRODUCT METERS normally used for the CALIBRATION of FIELDCLASS DOSIMETERS. The object of this document is 1) to establish requirements for a satisfactory level of performance for DOSE AREA PRODUCT METERS, and 2) to standardize the methods for the determination of compliance with this level of performance. Two levels of performance are specified: - a lower level of performance applying to FIELD-CLASS DOSE AREA PRODUCT METERS; - a higher level of performance applying to REFERENCE-CLASS DOSE AREA PRODUCT METERS.

SIST EN IEC 60601-2-31:202

Dopolnilo A1:2020 je dodatek k standardu SIST EN 60598-2-22:2015.

Ta del standarda IEC 60598 določa zahteve za svetilke za zasilno razsvetljavo za uporabo z zasilnimi napajalnimi sistemi, ki ne presegajo napetosti 1000 V. Ta del ne zajema učinkov zmanjšanja napetosti v primerih, ki niso nujni, na visokotlačne razelektrilne svetilke. Ta del določa splošne zahteve za opremo za zasilno razsvetljavo. V tem delu se še vedno uporablja izraz »svetilka«, ki zajema tudi »vir(e) svetlobe«, kjer je to ustrezno.

Moduli LED za splošno razsvetljavo - Varnostne specifikacije (IEC 62031:2018)

LED modules for general lighting - Safety specifications (IEC 62031:2018)

Osnova: EN IEC 62031:2020

ICS: 29.140.99

EN-IEC 62031 specifies general and safety requirements for light-emitting diode (LED) modules: • non-integrated LED modules (LEDni modules) and semi-integrated LED modules (LEDsi modules) for operation under constant voltage, constant current or constant power; • Integrated LED modules (LEDi modules) for use on DC supplies up to 250 V or AC supplies up to 1 000 V at 50 Hz or 60 Hz. LED modules within the scope of this document can be integral, built-in or independent. This document is not applicable for LED lamps.

Cold rolled uncoated low carbon steel narrow strip for cold forming - Technical delivery conditions

Osnova: EN 10139:2016+A1:2020

ICS: 77.140.50

1.1 This European Standard applies to cold rolled narrow strip in coils and cut lengths in thicknesses up to 10 mm and of widths less than 600 mm, made from low carbon, unalloyed and alloyed steels in accordance with Table 1.

These products are suitable for cold forming. They are also suitable for surface coating. On the other hand, they are not suitable for hardening treatment followed by tempering.

1.2 This European Standard does not cover cold rolled flat products for which a separate standard already exists, particularly the following products:

- cold rolled non-oriented electrical steel sheet and strip delivered in the fully processed state (EN 10106);
- grain-oriented electrical steel sheet and strip delivered in the fully processed state (EN 10107);
- cold rolled electrical non-alloy and alloy steel sheet and strip delivered in the semi-processed state (EN 10341);
- cold rolled narrow steel strip for heat treatment (EN 10132 1 to -4);
- cold rolled steel flat products with higher yield strength for cold forming (EN 10268);
- cold rolled low carbon steel flat products for cold forming (EN 10150);
- cold reduced blackplate in coil form for the production of tinplate or electrolytic chromium/chromium oxide coated steel (EN 10205);
- cold rolled low carbon steel flat products for vitreous enamelling (EN 10209).

ICS: 25.220.99, 75.200

Dopolnilo A1:2020 je dodatek k standardu SIST EN ISO 21809-3:2016.

Ta del standarda ISO 21809 določa zahteve za prevleke spojev brezšivnih in varjenih jeklenih cevi v sistemih cevovodnega transporta v industriji nafte in zemeljskega plina, kot je opredeljeno v standardu ISO 13623. Ta del standarda ISO 21809 določa kvalifikacijo, uporabo in preskušanje protikorozjske prevleke na jeklenih površinah, ki ostanejo izpostavljene, ko se cevi in fittingi (komponente) spojijo z varjenjem.

Ta del standarda ISO 21809 ne obravnava dodatne mehanske zaščite, toplotne izolacije ali polnil spojev za prevlečene betonske cevi.

Ta del standarda ISO 21809 opredeljuje in kodificira različne vrste prevlek spojev za cevovode, zakopane v zemljo ali potopljene v vodo, kot je prikazano v preglednici 1.

OPOMBA: Cevi, ki so prevlečene v skladu s tem delom standarda ISO 21809, so predvidoma ustrezne za dodatno katodno zaščito.

Industrijski ventili - Kovinski protipovratni ventili

Industrial valves - Metallic check valves

Osnova: EN 16767:2020

ICS: 23.060.50

This document specifies the general requirements for metallic check valves, which are forged, cast or fabricated in straight, angle or oblique pattern (see EN 736-2) with end connections flanged or wafer, butt welding, socket welding, or threaded.

This document applies to metallic check valves used for all industrial applications.

Additional requirements given in the relevant application standards may apply to check valves used for more specific applications (e.g. for the water industry, the chemical and petrochemical process industry, the gas distribution industry).

Sanitary check valves and back flow prevention anti-pollution check valves are excluded from the scope of this document.

The range of nominal sizes covered is:

- DN 8; DN 10; DN 12; DN 15; DN 20; DN 25; DN 32; DN 40; DN 50; DN 65; DN 80; DN 100; DN 125; DN 150; DN 200; DN 250; DN 300; DN 350; DN 400; DN 450; DN 500; DN 600; DN 700; DN 750; DN 800; DN 900; DN 1 000; DN 1 200.

DN 8 and DN 12 are not used for PN designated flanged end connections.

DN 8, DN 10 and DN 12 are not used for Class designated flanged end connections.

DN 750 is used for Class designated check valves only.

Socket welding end check valves and threaded end check valves are limited to the range DN 8 to DN 65.

The range of pressure designations covered is:

a) for flanged end and wafer type end cast iron bodies:

- PN 2,5; PN 6; PN 10; PN 16; PN 25;

- Class 125; Class 250;

b) for flanged end, wafer type and butt welding end bodies in steel or copper alloy materials:

- PN 2,5; PN 6; PN 10; PN 16; PN 25; PN 40; PN 63; PN 100; PN 160; PN 250; PN 320; PN 400;

- Class 150; Class 300; Class 600; Class 900 ; Class 1 500; Class 2 500;

c) for socket welding end and threaded end bodies in steel or copper alloy materials:

- PN 40; PN 63; PN 100;

- Class 600; Class 800.

NOTE Class 800 is a widely used Class designation for socket welding and threaded end check valves.

The correspondence between DN and NPS is given for information in Annex B.

ICS: 65.060.80

This document specifies safety requirements and their verification for design and construction of transportable, i.e. self-propelled, mounted, semi-mounted and trailed, wood chippers used in forestry, agriculture, horticulture and landscaping.

This document applies to chippers, used when stationary, which are manually loaded with wood through a horizontal or near horizontal infeed chute and where the infeed action is performed by the chipping components acting as infeed components and by separate integrated infeed components such as rollers or chain conveyors integral to the infeed chute.

The included wood chippers may be designed either for continuous working (loading, feeding and chipping) or for batch-wise operation of loading.

The included wood chippers may be powered either by an external power take-off, hydraulics etc. or by an integral power source such as an internal combustion engine.

Karakterizacija enokomponentnih pen - 4. del: Mehanska trdnost

Characterization of One Component Foam - Part 4: Mechanical strength

Osnova: EN 17333-4:2020

ICS: 83.180

This document specifies test methods for the evaluation of the mechanical properties for moisture curing, self-curing or water drying foams dispensed from single pressurized containers used as an insulating air sealant and adhesive for both building and non-building applications.

This document does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory requirements prior to use.

The following test methods are described:

- **Compression strength:** This test method describes how to determine the compressive strength of a cured foam. It gives an indication of the foams resistance against area distributed pressure. The maximum endurable stress is determined.
- **Movement capability:** This test method describes how to determine the movement capability of cured foam. The result gives an indication of the degree of flexibility of the cured foam.
- **Bonding strength:** The method displays the measurement of the bonding power of a One Component (Foam) Adhesive, dispensed from a pressurized can, between two substrates with direct contact.
- **Tensile strength:** This test method describes how to determine the maximum stress a cured foam can withstand while being stretched before breaking. The result gives an indication of the elasticity of the cured foam.
- **Shear strength:** This method displays the behavior of a foam system towards shear forces. It shows the strength and the bonding power of the foam as the sandwich element between wooden plates. The test is conducted according to EN 12090.

SIST EN ISO 23153-1:2020**2020-06 (po) (en;fr;de)****16 str. (D)**

Polimerni materiali - Materiali na osnovi poliethereterketona (PEEK) za oblikovanje in ekstrudiranje - 1. del: Sistem označevanja in podlage za specifikacije (ISO 23153-1:2020)

Plastics - Polyetheretherketone (PEEK) moulding and extrusion materials - Part 1: Designation system and basis for specifications (ISO 23153-1:2020)

Osnova: EN ISO 23153-1:2020

ICS: 83.080.20

1.1 This part of ISO xxxx establishes a system of designation for polyetheretherketone (PEEK) moulding and extrusion materials which may be used as the basis for specifications. Polyetheretherketone polymer chains are composed of phenylene rings linked in (1,4) position by a sequence of two ether groups followed by one ketone group.

1.2 The grades of PEEK plastics are differentiated from each other by a classification system based on appropriate levels of the designatory properties

a) melt viscosity or melt volume-flow rate, b) tensile modulus, c) tensile strength

and on information about the intended application and/or method of processing, important properties, additives, colorants, fillers and reinforcing materials.

1.3 The designation system is applicable to all polyetheretherketones.

It applies to materials ready for normal use in the form of powder, granules or pellets, unmodified or modified by colourants, fillers, reinforcements or other additives.

1.4 It is not intended to imply that materials having the same designation give necessarily the same performance. This part of ISO xxxx does not provide engineering data, performance data or data on processing conditions which may be required to specify a material for a particular application and/or method of processing. If such additional properties are required, they shall be determined in accordance with the test methods specified in ISO xxxx-2, if suitable.

1.5 In order to specify a thermoplastic material for a particular application or to ensure reproducible processing, additional requirements may be given in data block 5.

SIST EN ISO 75-1:2020

SIST EN ISO 75-1:2013

2020-06 (po) (en;fr;de)**17 str. (E)**

Polimerni materiali - Ugotavljanje temperature upogiba pod obremenitvijo - 1. del: Splošna preskusna metoda (ISO 75-1:2020)

Plastics - Determination of temperature of deflection under load - Part 1: General test method (ISO 75-1:2020)

Osnova: EN ISO 75-1:2020

ICS: 83.080.01

EN-ISO 75-1 gives a general test method for the determination of the temperature of deflection under load (flexural stress under three-point loading) of plastics. Different types of test specimen and different constant loads are defined to suit different types of material. ISO 75-2 gives specific requirements for plastics (including filled plastics and fibre-reinforced plastics in which the fibre length, prior to processing, is up to 7,5 mm) and ebonite, while ISO 75-3 gives specific requirements for high-strength thermosetting laminates and long-fibre-reinforced plastics in which the fibre length, prior to processing, is greater than 7,5 mm. The methods specified are suitable for assessing the relative behaviour of different types of material at elevated temperature under load at a specified rate of temperature increase. The results obtained do not necessarily represent maximum applicable temperatures because, in practice, essential factors, such as time, loading conditions and nominal surface stress, can differ from the test conditions. True comparability of data can only be achieved for materials having the same room-temperature flexural modulus. The methods specify preferred dimensions for the test specimens. Data obtained using the test methods described are not intended to be used to predict actual end-use performance. The data are not intended for design analysis or prediction of the endurance of materials at elevated temperatures. This method is commonly known as the heat deflection temperature or heat distortion temperature (HDT) test, although there is no official document using this designation.

Točnost (pravilnost in natančnost) merilnih metod in rezultatov - 2. del: Temeljna metoda določevanja ponovljivosti in obnovljivosti standardne meritne metode

Accuracy (trueness and precision) of measurement methods and results - Part 2: Basic method for the determination of repeatability and reproducibility of a standard measurement method

Osnova: ISO 5725-2:2019

ICS: 17.020, 03.120.30

1.1 This document

- amplifies the general principles for designing experiments for the numerical estimation of the precision of measurement methods by means of a collaborative interlaboratory experiment;
- provides a detailed practical description of the basic method for routine use in estimating the precision of measurement methods;
- provides guidance to all personnel concerned with designing, performing or analysing the results of the tests for estimating precision.

NOTE Modifications to this basic method for particular purposes are given in other parts of ISO 5725.

1.2 It is concerned exclusively with measurement methods which yield measurements on a continuous scale and give a single value as the test result, although this single value can be the outcome of a calculation from a set of observations.

1.3 It assumes that in the design and performance of the precision experiment, all the principles as laid down in ISO 5725-1 are observed. The basic method uses the same number of test results in each laboratory, with each laboratory analysing the same levels of test sample; i.e. a balanced uniform-level experiment. The basic method applies to procedures that have been standardized and are in regular use in a number of laboratories.

1.4 The statistical model of ISO 5725-1:1994, Clause 5, is accepted as a suitable basis for the interpretation and analysis of the test results, the distribution of which is approximately normal.

1.5 The basic method, as described in this document, (usually) estimates the precision of a measurement method:

- a) when it is required to determine the repeatability and reproducibility standard deviations as defined in ISO 5725-1;
- b) when the materials to be used are homogeneous, or when the effects of heterogeneity can be included in the precision values; and
- c) when the use of a balanced uniform-level layout is acceptable.

1.6 The same approach can be used to make a preliminary estimate of precision for measurement methods which have not reached standardization or are not in routine use.

Točnost (pravilnost in natančnost) merilnih metod in rezultatov - 4. del: Temeljne metode določevanja pravilnosti standardne meritne metode

Accuracy (trueness and precision) of measurement methods and results – Part 4: Basic methods for the determination of the trueness of a standard measurement method

Osnova: ISO 5725-4:2020

ICS: 17.020, 03.120.30

1.1 This document

- specifies basic methods for estimating the bias of a measurement method and the laboratory bias when a measurement method is applied;
- provides a practical approach of a basic method for routine use in estimating the bias of measurement methods and laboratory bias;

— provides a brief guidance to all personnel concerned with designing, performing or analysing the results of the measurements for estimating bias.

1.2 It is concerned exclusively with measurement methods which yield measurements on a continuous scale and give a single value as the measurement result, although the single value can be the outcome of a calculation from a set of observations.

1.3 This document applies when the measurement method has been standardized and all measurements are carried out according to that measurement method.

NOTE In ISO/IEC Guide 99:2007(VIM), "measurement procedure" (2.6) is an analogous term related to the term "measurement method" used in this document.

1.4 This document applies only if an accepted reference value can be established to substitute the true value by using the value, for example:

- of a suitable reference material;
- of a suitable measurement standard;
- referring to a suitable measurement method;
- of a suitable prepared known sample.

1.5 This document applies only to the cases where it is sufficient to estimate bias on one property at a time. It is not applicable if the bias in the measurement of one property is affected by the level of any other property (i.e. it does not consider interferences by any influencing quantity). Comparison of the trueness of two-measurement methods is considered in ISO 5725-6.

SIST/TC ITC Informacijska tehnologija

SIST EN ISO 11073-20701:2020

2020-06 (po) (en;fr;de) 50 str. (I)

Zdravstvena informatika - Interoperabilnost naprav - 20701. del: Komunikacija medicinskih naprav na mestu oskrbe - Storitveno usmerjena arhitektura in protokol za komunikacijo z medicinskimi napravami (ISO/IEEE 11073-20701:2020)

Health informatics - Device interoperability - Part 20701: Point-of-care medical device communication - Service oriented medical device exchange architecture and protocol binding (ISO/IEEE 11073-20701:2020)

Osnova: EN ISO 11073-20701:2020

ICS: 35.240.80

The scope of this standard is a service-oriented medical device architecture and communication protocol specification for distributed system of Point-of-Care (PoC) medical devices and medical IT systems that need to exchange data or safely control networked PoC medical devices. It identifies the functional components, their communication relationships as well as the binding of the components and communication relationships to protocol specifications.

SIST EN ISO 14906:2019/A1:2020

Elektronsko pobiranje pristojbin - Definicija aplikacijskega vmesnika za posebne komunikacije kratkega dosega - Dopolnilo A1 (ISO 14906:2018/Amd 1:2020)

Electronic fee collection - Application interface definition for dedicated short-range communication - Amendment 1 (ISO 14906:2018/Amd 1:2020)

Osnova: EN ISO 14906:2018/A1:2020

ICS: 03.220.20, 35.240.60

Dopolnilo A1:2020 je dodatek k standardu SIST EN ISO 14906:2019.

Aplikacijski vmesnik za elektronsko pobiranje pristojbin (EFC) je aplikacijski postopkovni vmesnik za elektronsko pobiranje pristojbin za aplikacijsko plast DSRC, kot je razvidno na sliki 1 spodaj. Ta dokument zajema specifikacije za:

- atribute elektronskega pobiranja pristojbin (tj. informacije sistema elektronskega pobiranja cestnin), ki jih je mogoče uporabiti tudi za druge aplikacije, in/ali vmesnike,

- obravnavane postopke atributov sistema elektronskega pobiranja cestnin in sestavnih delov (strojne opreme) (npr. kartice z integriranim vezjem (ICC) in vmesniki človek-stroj (MMI)),
- funkcije sistema elektronskega pobiranja pristojbin, tj. nadaljnja kvalifikacija dejanj z definicijami obravnavanih storitev,
- dodelitev povezanih vrednosti »ActionType« ter vsebina in pomen parametrov dejanj,
- model transakcije elektronskega pobiranja pristojbin, ki določa skupne elemente in korake katere koli transakcije elektronskega pobiranja pristojbin,
- delovanje vmesnika za zagotavljanje interoperabilnosti na ravni aplikacijskega vmesnika za EFC-DSRC.

To je vmesniški standard, ki se ravna po načelu povezanih odprtih sistemov (OSI) (glej ISO/IEC 7498-1) in kot tak ni primarno povezan z načini izvajanja, ki jih je treba udejanjiti na obeh straneh vmesnika.

Ta dokument zagotavlja varnostno specifično funkcijo označbe mesta (podatki in funkcije), kar omogoča izvajanje varnih transakcij elektronskega pobiranja pristojbin. Vendar pa specifikacija varnostne politike (vključno s posebnimi varnostnimi algoritmi in upravljanjem ključev) ostaja v presoji in pod nadzorom upravljavca elektronskega pobiranja pristojbin in zato ne spada na področje uporabe tega dokumenta.

SIST-TS CEN/TS 16614-5:2020

SIST-TS CEN/TS 16614-5:2016

2020-06

(po) (en;fr;de)

622 str. (2E)

Javni prevoz - Izmenjava omrežnih in voznorednih podatkov (NeTEx) - 3. del: Format za izmenjavo informacij o vozovnicah

Public transport - Network and Timetable Exchange (NeTEx) - Part 3: Public transport fares exchange format

Osnova: CEN/TS 16614-5:2020

ICS: 35.240.60

1.1 General

NeTEx is dedicated to the exchange of scheduled data (network, timetable and fare information). It is based on Transmodel V5.1 (EN 12986), IFOPT (EN 28701) and SIRI (CEN/TS 15531-4/5 and EN 15531-1/2/3) and supports the exchange of information of relevance for passenger information about public transport services and also for running Automated Vehicle Monitoring Systems (AVMS).

NOTE NeTEx is a refinement and an implementation of Transmodel and IFOPT; the definitions and explanations of these concepts are extracted directly from the respective standard and reused in NeTEx, sometimes with adaptations in order to fit the NeTEx context. Although the data exchanges targeted by NeTEx are predominantly oriented towards provisioning passenger information systems and AVMS with data from transit scheduling systems, it is not restricted to this purpose and NeTEx can also provide an effective solution to many other use cases for transport data exchange.

1.2 Fares scope

This Part3 of NeTEx, is specifically concerned with the exchange of fare structures and fare data, using data models that relate to the underlying network and timetable models defined in Part1 and Part2 and the Fare Collection data model defined in Transmodel V51. See the use cases below for the overall scope of Part3. In summary, it is concerned with data for the following purposes:

- To describe the many various possible fare structures that arise in public transport (for example, flat fares, zonal fares, time dependent fares, distance-based fares, stage fares, pay as you go fares, season passes, etc., etc.).
- To describe the fare products that may be purchased having these fare structures and to describe the conditions that may attach to particular fares, for example if restricted to specific groups of users, or subject to temporal restrictions. These conditions may be complex.
- To allow actual price data to be exchanged. Note however that NeTEx does not itself specify pricing algorithms or how fares should be calculated. This is the concern of Fare Management Systems. It may be used to exchange various parameters required for pricing calculations that are needed to explain or justify a fare.
- To include the attributes and the text descriptions necessary to present fares and their conditions of sale and use to the public.

NeTEx should be regarded as being ‘upstream’ of retail systems and allows fare data to be managed and integrated with journey planning and network data in public facing information systems. It is complementary to and distinct from the ‘downstream’ ticketing and retail systems that sell fares and of the control systems that validate their use. See ‘Excluded Use Cases’ below for further information on the boundaries of NeTEx with Fare Management Systems.

1.3 Transport modes

All mass public transport modes are taken into account by NeTEx, including train, bus, coach, metro, tramway, ferry, and their submodes. It is possible to describe airports, air journeys, and air fares, but there has not been any specific consideration of any additional requirements that apply specifically to air transport.

SIST-TS CEN/TS 16614-4:2020

2020-06 (po) (en;fr;de) 177 str. (R)

Javni prevoz - Izmenjava omrežnih in voznorednih podatkov (NeTEx) - 4. del: Evropski profil za informacije o potnikih

Public transport - Network and Timetable Exchange (NeTEx) - Part 4: Passenger Information European Profile

Osnova: CEN/TS 16614-4:2020

ICS: 55.240.60

This technical specification is a profile of CEN/TS 16614 series. It focuses on information relevant to feed passenger information services and excludes operational and fares information.

NeTEx is dedicated to the exchange of scheduled data (network, timetable and fare information) based on Transmodel V6 (EN 12986) and SIRI (CEN/TS 15531-4/5 and EN 15531-1/2/3) and supports information exchange of relevance to public transport services for passenger information and AVMS systems.

As for most data exchange standards, defining subsets of data and dedicated rules for some specific use case is of great help for implementers and for the overall interoperability. This subset is usually called profile and this profile targets passenger information as only use case.

Inteligentni transportni sistemi - Mestni ITS - Uporaba regionalnih prometnih standardov v mešanem prodajnem okolju

Intelligent transport systems - Urban ITS - Use of regional traffic standards in a mixed vendor environment

Osnova: CEN/TS 17402:2020

ICS: 35.240.60

This document will provide a background to the relevance of standards concerning mixed vendor environments in the context of urban-ITS. It will describe key mixed vendor environments interfaces.

It will define:

- Open specifications for sensor systems: existing open specifications and provides common specifications
- Open specifications for traffic control: existing open specifications and provides common specifications
- Open specifications for traffic information: existing open specifications and provides common specifications
- Open specifications for public transport information systems: existing open specifications and provides common specifications
- Open specifications for distributed C-ITS: existing open specifications and provides common specifications
- Open specifications for central systems: existing open specifications and provides common specifications

It will describe openly plied proprietary standards and extant communications protocols that can be used in mixed vendor environments in the context of urban-ITS.

Železniške naprave - Zahteve za zagotavljanje varnosti železniških vozil pri trčenju

Railway applications - Crashworthiness requirements for rail vehicles

Osnova: EN 15227:2020

ICS: 45.060.01

This European Standard applies to new designs of locomotives and passenger carrying rolling stock as defined in categories C-I to C-IV of Clause 4 taking into consideration the recommendations given in

Annex E on the application of the standard (migration rule). It is intended to protect vehicle occupants, through the preservation of structural integrity, and does not extend to other railway employees and customers who are not in vehicles, or to third parties. The specified requirements relate to the technical and operational conditions of use that prevail in the CEN member countries. The design of new vehicles for use in passenger trains is based on operations with compatible rolling stock that also meet this standard. It is recognised that operational requirements will require new crashworthy and existing non-crashworthy vehicles to exist in the same train unit but such combinations of vehicles are not required to comply with this European Standard.

The requirements apply to the vehicle body, and to those mechanical elements directly associated with it that may be used to absorb energy in a collision, such as couplers, buffering systems etc. They do not cover the safety features of doors, windows, system components or interior features except for specific issues relating to the preservation of survival space.

The requirements do not cover all possible accident scenarios but provide a level of crashworthiness that will reduce the consequences of an accident, when the active safety measures have been inadequate. The requirement is to provide a level of protection by addressing the most common types of collision that cause injuries and fatalities.

The applicable design collision scenarios, and suitable parameters for normal European operations, are given in Clause 5. Annex A gives additional information regarding the derivation of the scenarios and describes situations when they may need to be modified and the processes that should then be followed.

*Microbiology of food and animal feeding stuffs - Horizontal method for the enumeration of presumptive *Bacillus cereus* - Colony-count technique at 30 degrees C - Amendment 1: Inclusion of optional tests (ISO 7932:2004/Amd 1:2020)*

Osnova: EN ISO 7932:2004/A1:2020

ICS: 07.100.30

Dopolnilo A1:2020 je dodatek k standardu SIST EN ISO 7932:2005.

This International Standard specifies a horizontal method for the enumeration of viable presumptive *Bacillus cereus* by means of the colony-count technique at 30 °C. It is applicable to

- products intended for human consumption and the feeding of animals, and
- environmental samples in the area of food production and food handling.

NOTE In order to have a practicable test method, the confirmatory stage has been restricted to the typical aspect on MYP agar and the haemolysis test. Thus the term "presumptive" has been introduced in order to acknowledge the fact that the confirmatory stage does not enable the distinction of *B. cereus* from other closely related but less commonly encountered *Bacillus* species, such as *B. anthracis*, *B. thuringiensis*, *B. weihenstephanensis*, *B. mycoides*. An additional motility test may help to differentiate *B. cereus* from *B. anthracis* in cases where the presence of the latter is suspected.

Zaščitna sredstva za les - Ugotavljanje učinkovitosti zatiranja ličink hišnega kozlička *Hylotrupes bajulus* (Linnaeus) - Laboratorijska metoda

*Wood preservatives - Determination of the eradicant action against *Hylotrupes bajulus* (Linnaeus) larvae - Laboratory method*

Osnova: EN 1390:2020

ICS: 71.100.50

This document specifies a method for the determination of the eradicant action of a surface application of a fast and a slow acting wood preservative product or a deferred acting wood preservative product on timber infested with larvae of *Hylotrupes bajulus* (Linnaeus).

This method is applicable to:

organic formulations, as supplied or as prepared in the laboratory by dilution of concentrates, or organic water dispersible formulations, as supplied or as prepared in the laboratory by dilution of concentrates, or water soluble products, for example, salts.

NOTE An ageing procedure cannot be combined with this method.

SIST EN 14128:2020

2020-06 (po) (en;fr;de)

SIST EN 14128:2004

18 str. (E)

Trajnost lesa in lesnih proizvodov - Merila učinkovitosti kurativnih biocidnih proizvodov za les, ugotovljene z biološkimi preskusi

Durability of wood and wood-based products - Efficacy criteria for curative wood preservatives as determined by biological tests

Osnova: EN 14128:2020

ICS: 79.040, 71.100.50

This European Standard specifies the minimum performance requirements in biological tests for products for curative uses against specific wood destroying organisms. It specifies the biological tests required together with the efficacy criteria to be achieved in each test.

Chemicals against insects can act according to their specific properties within a short time (fast acting) or only after a long period (slow acting or with a deferred effect). Different tests and efficacy requirements are needed for these various types of curative wood preservatives.

This European Standard is applicable to all wood preservative products supplied for application in liquid form for curative uses against attack by wood boring beetles. This European Standard is also applicable for products applied to prevent the growth of the dry rot fungus through masonry.

This European Standard is also applicable to products for curative uses supplied for application as pastes, solids or in capsule form but only where appropriate biological methods of test exist as published European Standards or as normative annexes to this European Standard.

NOTE 1 For re-testing after making variations in product formulation, guidance is given in Annex A.

NOTE 2 This standard is used as a reference document for the evaluation of efficacy of biocidal products PT8 (wood preservatives) in the framework of the European Regulation on Biocidal Products (EU) No 528/2012 (BPR).

This European Standard is not applicable to products used as fumigants.

This European Standard is also not applicable for determining whether specific curative products, used alone or in combination, are effective in conferring long-term protection against attack by wood destroying organisms. Preventive effectiveness can be determined using EN 599-1 but only for products that can be tested using the methods and interpretative procedures defined in EN 599-1.

Annex A (informative) contains a guidance on re-testing after making variations in product formulation.

Annex B (informative) contains some test recommendations for specific curative products against other insect species than *Hylotrupes bajulus* and *Anobium punctatum*.

Annex C (informative) contains a guidance for physical chemical properties.

SIST EN 303 215-5-1 V1.1.1:2020

2020-06 (po) (en)

52 str. (G)

Napredni sistem za vodenje in nadzor gibanja po zemlji (A-SMGCS) - 5. del: Harmonizirani standard za dostop do radijskega spektra za večplastno (MLAT) opremo - 1. poddel: Sprejemniki in brałniki

Advanced Surface Movement Guidance and Control System (A-SMGCS) - Part 5: Harmonised Standard for access to radio spectrum for Multilateration (MLAT) equipment - Sub-part 1: Receivers and Interrogators

Osnova: ETSI EN 303 215-5-1 V1.1.1 (2020-05)

ICS: 49.090, 03.220.50

The present document specifies technical characteristics and methods of measurements for the following equipment:

1) Interrogators transmitting in the 1 030 MHz band, used in Mode S multilateration equipment in an Advanced Surface Movement Guidance and Control System (A-SMGCS).
2) Receivers, receiving in the 1 090 MHz band, used in Mode S multilateration equipment in an Advanced Surface Movement Guidance and Control System (A-SMGCS).
Antennas for this equipment are external and passive without an additional amplifier.
The present document does not apply to equipment which includes a transponder function, to ground vehicle locators and to reference transmitters which do not contain receivers for the purpose of replying to interrogation.
NOTE: The relationship between the present document and essential requirements of article 3.2 of Directive 2014/53/EU [i.1] is given in Annex A.

Wireless Industrial Applications (WIA) - Equipment operating in the 5 725 MHz to 5 875 MHz frequency range with power levels ranging up to 400 mW - Harmonised Standard for access to radio spectrum

Osnova: ETSI EN 303 258 V1.1.1 (2020-04)

ICS: 33.060.01

To produce a Harmonised Standard under article 3.2 of the R&TTE Directive, taking into account the ECC Report 206 to support Wireless industrial automation devices within the 5,725 GHz to 5,875 GHz frequency range. Equipment related to the EN is described in TR 102 889-2.

SIST EN 60794-1-21:2015/A1:2020

2020-06 (po) (en) 22 str. (F)

Optični kabli - 1-21. del: Splošne specifikacije - Osnovni preskusni postopki za optične kable - Mehanske preskusne metode - Dopolnilo A1 (IEC 60794-1-21:2015/A1:2020)

Optical fibre cables - Part 1-21: Generic specification - Basic optical cable test procedures - Mechanical tests methods (IEC 60794-1-21:2015/A1:2020)

Osnova: EN 60794-1-21:2015/A1:2020

ICS: 19.060, 33.180.10

Dopolnilo A1:2020 je dodatek k standardu SIST EN 60794-1-21:2015.

Ta del standarda IEC 60794 obravnava optične kable za uporabo s telekomunikacijsko opremo in napravami, ki uporabljajo podobne tehnike, ter kable s kombinacijo optičnih vlaken in električnih vodnikov. Cilj tega standarda je opredeliti preskusne postopke, ki jih je treba uporabiti pri določanju enotnih zahtev za mehansko učinkovitost. V tem standardu lahko izraz »optični kabel« vključuje tudi optične enote, mikrokanale itd. Splošne zahteve in definicije so podane v standardu IEC 60794-1-20, popolna referenčna navodila za vse tipe testnih metod pa so podana v standardu IEC 60794-1-2.

SIST EN 61300-2-19:2013/AC:2020

2020-06 (po) (en,fr) 5 str. (AC)

Optični spojni elementi in pasivne komponente - Osnovni preskusni in merilni postopki - 2-19. del: Preskusi - Pregreta para (ustaljeno stanje) - Popravek AC (IEC 61300-2-19:2012/COR1:2020)

Fibre optic interconnecting devices and passive components - Basic test and measurement procedures - Part 2-19: Tests - Damp heat (steady state) (IEC 61300-2-19:2012/COR1:2020)

Osnova: EN 61300-2-19:2013/AC:2020-04

ICS: 33.180.20

Popravek k standardu SIST EN 61300-2-19:2013.

V tem delu standarda IEC 61300 je podrobno opisan postopek za ugotavljanje primernosti optičnih spojnih elementov in pasivnih komponent za odpornost proti okoljskemu pogoju visoke vlažnosti in temperature, ki se lahko pojavi med dejanskim delovanjem, shranjevanjem in/ali transportom. Preskus je prvenstveno namenjen omogočanju opazovanja učinkov visoke vlage pri stalni temperaturi v določenem časovnem območju. Zaradi absorpcije vlage se lahko pojavi nabrekanje, ki lahko uniči funkcionalnost ter povzroči izgubo fizične moči in spremembe drugih pomembnih mehanskih lastnosti. Tudi optične lastnosti se lahko poslabšajo. Ta preskus je lahko koristen tudi pri ugotavljanju absorpcije vlage pri izolacijskih in pokrivnih materialih, čeprav prvenstveno ni bil mišljen kot simuliran tropski preskus.

Naftni merilni sistemi - Umerjanje - Volumetrični ukrepi, rezervoarji in terenski ukrepi (vključno s formulami za lastnosti tekočin in materialov) (ISO 8222:2020)

Petroleum measurement systems - Calibration - Volumetric measures, proving tanks and field measures (including formulae for properties of liquids and materials) (ISO 8222:2020)

Osnova: EN ISO 8222:2020

ICS: 75.180.30

EN-ISO 8222 describes the design, use and calibration of volumetric measures (capacity measures) which are intended for use in fixed locations in a laboratory or in the field. This document gives guidance on both standard and non-standard measures. It also covers portable and mobile measures. This document is applicable to the petroleum industry; however, it may be applied more widely to other applications. This document excludes measures for cryogenic liquids and pressurized measures as used for liquid petroleum gas (LPG) and liquefied natural gas (LNG). Volumetric measures are classified as test measures or prover tanks depending on capacity and design. Measures described in this document are primarily designed, calibrated and used to measure volumes from a measure which is wetted and drained for a specified time before use and designated to deliver. Many of the provisions, however, apply equally to measures which are used to measure a volume using a clean and dry measure and designated to contain. Guidance is given regarding commonly expected uncertainties and calibration specifications. The document also provides, in Annex A, reference formulae describing the properties of water and other fluids and materials used in volumetric measurement more generally.

Automotive fuels - Information on aniline, N-methyl aniline, N-ethyl aniline, N,N di-methyl aniline and secondary-butyl acetate when used as blending components in unleaded petrol

Osnova: CEN/TR 17491:2020

ICS: 75.160.20

This document is intended to draw attention to the potential technical consequences on engine parts and fuel systems when some types of chemical compounds are used as blending components in unleaded petrol.

The chemical compounds addressed specifically in this document are: secondary- Butyl acetate, Aniline and its derivatives such N-Methyl Aniline, N-Ethyl Aniline and di-Methyl Aniline.

Other chemical compounds are not addressed in this document, however attention is drawn to clause 5.4 of EN 228 which requires that unleaded petrol shall be free from any adulterant or contaminant that can render the fuel unacceptable for use. Thus when considering blending of other chemical compounds, care should be taken to ensure they are fit for use in order to comply with this requirement.

This document does not address environmental and/or health related issues. These aspects are beyond the scope of CEN/TC19 activities.

Cevni sistemi iz polimernih materialov za odpadno vodo in kanalizacijo, ki delujejo po težnostnem principu in so položeni v zemljo - Nemehčan polivinilklorid (PVC-U), polipropilen (PP) in polietilen (PE) - 1. del: Specifikacije za pomožne fitinge in plitve revizijske jaške

Plastics piping systems for non-pressure underground drainage and sewerage - Unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP) and polyethylene (PE) - Part 1: Specifications for ancillary fittings and shallow chambers

Osnova: EN 13598-1:2020

ICS: 93.030, 23.040.05

This document specifies the definitions and requirements for ancillary fittings and shallow chambers installed underground in non-pressure drainage and sewerage systems and manufactured from unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP), polypropylene with mineral modifier (PP-MD) or polyethylene (PE) intended for use for:

- non-pressure underground drainage and sewerage outside the building structure (application area code "U"), and

- non-pressure underground drainage and sewerage for both buried in ground within the building structure (application area code "D") and outside the building structure.

This is reflected in the marking of products by "U" and "UD".

It also covers the jointing of the ancillary fittings and shallow chambers to the pipework system.

The ancillary fittings covered by this standard are the following:

- sealed access fittings;

- rodding point covers;

- rodding tees;

- mechanical saddles.

Ancillary fittings according to this document are intended for use in pedestrian or vehicular traffic areas.

Ancillary fittings can be installed to a maximum depth of 6,0 m from ground level, with the exception of rodding point covers.

Shallow chambers according to this document are intended for use in private drains located in pedestrian areas above the ground water table, to a maximum depth of 2,0 m from ground level to the invert of the main channel. This document covers shallow chambers with flow profile bases, and their joints to the piping system.

NOTE 1 EN 124-series [1] and EN 1253-4 [2] covers may be used for shallow chambers.

NOTE 2 Manholes and inspection chambers are specified in EN 13598-2.

Ancillary fittings and shallow chambers complying with EN13598-1 comply with the general requirements given in EN 476.

Ancillary fittings and shallow chambers can be manufactured by various methods e.g. injection moulding, rotational moulding, spiral winding or fabricated from components made to other standards.

NOTE 3 Product complying with this document may be used with pipes, fittings and other components conforming to any of the plastics products standards listed in Clause 2, provided their dimension comply with the requirements for joint dimensions given in Clause 7 and to the requirements of Table 6.

NOTE 4 Products complying with this document can be installed in underground applications without additional static calculation.

SIST EN 13598-2:2020

Cevni sistemi iz polimernih materialov za odpadno vodo in kanalizacijo, ki delujejo po težnostnem principu in so položeni v zemljo - Nemehčan polivinilklorid (PVC-U), polipropilen (PP) in polietilen (PE) - 2. del: Specifikacije za vstopne in revizijske jaške

Plastics piping systems for non-pressure underground drainage and sewerage - Unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP) and polyethylene (PE) - Part 2: Specifications for manholes and inspection chambers

Osnova: EN 13598-2:2020

ICS: 93.030, 23.040.05

This document specifies the definitions and requirements for unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP) and polyethylene (PE) manholes and inspection chambers intended for non-pressure underground drainage and sewerage systems to a maximum depth of 6 m from ground level to the invert of the manhole or inspection chamber.

This document covers manholes and inspection chambers with flow profile bases, and their joints to the piping system.

Manholes and inspection chambers are intended to be used in pedestrian or vehicular traffic areas outside the building structure.

NOTE 1 The intended use in underground installation outside the building structure is reflected in the marking of products by the application area code "U".

NOTE 2 Products complying with this document may also be used in non-traffic areas.

NOTE 3 Products complying with this standard can be installed in underground applications without additional static calculation.

NOTE 4 Shallow chambers are specified in EN 13598-1.

Manholes and inspection chambers complying with EN 13598-2 are made from a prescribed set of components that are manufactured from unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP), polypropylene with mineral modifier (PP-MD) or polyethylene (PE) and assembled together.

NOTE 5 The complete manhole or inspection chamber assembly may also include non-plastic items (near surface or surface components for example) which are not covered by this document.

NOTE 6 Manholes and inspection chambers may be supplied with covers, frame covers and gratings complying with the relevant part of EN 124 [1].

Manholes and inspection chambers complying with EN 13598-2 comply with the general requirements given in EN 476.

Manholes and inspection chambers complying with EN 13598-2 may be used for storm-water systems.

Manhole and inspection chamber components can be manufactured by various methods e.g. extrusion, injection moulding, rotational moulding, low-pressure moulding or fabricated.

NOTE 7 Manholes and inspection chambers can be site assembled from different components, but can also be manufactured as a single unit.

Non-destructive testing - Qualification of radiographic film digitisation systems - Part 1: Definitions, quantitative measurements of image quality parameters, standard reference film and qualitative control (ISO 14096-1:2005)

Osnova: EN ISO 14096-1:2020

ICS: 19.100, 37.040.25

ISO 14096-1:2005 specifies procedures for the evaluation of basic performance parameters of the radiographic film digitisation process such as spatial resolution and spatial linearity, density range, density contrast sensitivity and characteristic transfer curve. They can be integrated into the system software and together with a standard reference film used for quality control of the digitisation process. This reference film provides a series of test targets for performance evaluation. The test targets are suitable for evaluating a digitisation system with a spatial resolution down to 25 micrometres, a density contrast sensitivity down to 0,02 optical density, a density range of 0,5 to 4,5 and a film size capacity of (350 x 430) mm². This standard does not address signal processing and display of the digitised data.

Neporušitvene preiskave - Kvalificiranje sistemov za digitaliziranje radiogramov - 2. del: Minimalne zahteve (ISO 14096-2:2005)

Non-destructive testing - Qualification of radiographic film digitisation systems - Part 2: Minimum requirements (ISO 14096-2:2005)

Osnova: EN ISO 14096-2:2020

ICS: 19.100, 37.040.25

ISO 14096-2:2005 specifies three film-digitisation quality classes for the requirements of non-destructive testing. The selected class depends on the radiation energy, penetrated material thickness and the quality level of the original radiographic film. ISO 14096-2:2005 does not address signal processing, display and storage of the digitised data.

Neporušitvene preiskave - Meritve in ugotavljanje električne napetosti na rentgenski cevi - 1. del: Metoda delitve napetosti (ISO 16526-1:2011)

Non-destructive testing - Measurement and evaluation of the X-ray tube voltage - Part 1: Voltage divider method (ISO 16526-1:2011)

Osnova: EN ISO 16526-1:2020

ICS: 19.100

ISO 16526-1:2011 specifies a method for the direct and absolute measurement of the average high voltage of constant potential (DC) X-ray systems on the secondary side of the high voltage generator. The intention is to check the correspondence with the indicated high voltage value on the control unit of the X-ray system.

This method is applied to assure a reproducible operation of X-ray systems because the voltage influences particularly the penetration of materials and the contrast of X-ray images and also the requirements concerning the radiation protection.

SIST EN ISO 16526-2:2020

SIST EN 12544-2:2001

2020-06**(po) (en;fr;de)****13 str. (D)**

Neporušitvene preiskave - Meritve in ugotavljanje električne napetosti na rentgenski cevi - 2. del: Preverjanje konstantnosti z metodo debelega filtra (ISO 16526-2:2011)

Non-destructive testing - Measurement and evaluation of the X-ray tube voltage - Part 2: Constancy check by the thick filter method (ISO 16526-2:2011)

Osnova: EN ISO 16526-2:2020

ICS: 19.100

ISO 16526-2:2011 specifies a constancy check of a X-ray system where mainly the X-ray voltage is checked and also the tube current and the constitution of the target which can be changing due to ageing of the tube.

The thick filter method is based on a measurement of the dose rate behind a defined thick filter using defined distances between the X-ray tube, the filter and the measuring device.

This method is very sensitive to changes of the voltage, but it does not provide an absolute value for the X-ray tube voltage. Therefore, a reference value is needed and, it is recommended to find this reference, for example, within the acceptance test of the system.

The thick filter method is a rather simple technique and may be applied by the operator of an X-ray system to perform regularly a constancy check of the system.

The method can also be applied for consistency checks after changing components which may affect the X-ray tube voltage.

This method can be applied for all types of X-ray systems, i. e. for constant potential, half wave and impulse wave generators with a tube current larger than 1 mA.

Spektrometrijska metoda (ISO 16526-3:2011)

Non-destructive testing - Measurement and evaluation of the X-ray tube voltage - Part 3: Spectrometric method (ISO 16526-3:2011)

Osnova: EN ISO 16526-3:2020

ICS: 19.100

ISO 16526-3:2011 specifies the test method for a non-invasive measurement of X-ray tube voltages using the energy spectrum of X-rays (spectrometric method). It covers the voltage range from 10 kV to 500 kV. The intention is to check the correspondence of the actual voltage with the indicated value on the control panel of the X-ray unit. It is intended to measure the maximum energy only and not the complete X-ray spectrum.

The procedure is applicable for tank type and constant potential X-ray units.

Dimovodne naprave - Oprema - 4. del: Dimovodne lopute - Zahteve in preskusne metode

Chimneys - Accessories - Part 4: Flue dampers - Requirements and test methods

Osnova: EN 16475-4:2020

ICS: 91.060.40

This European standard specifies the requirements and test methods for flue dampers that are used as components, carrying flue gas, in order to limit the flow in a chimney.

Flue dampers may be manually adjusted, sited in connecting flue pipes or chimneys, in order to reduce the burning rate (solid fuel stoves/fireplaces) or to work as a shut-off slide preventing back flow of soot during cleaning of the chimney, or mechanically driven for reducing/closing the flue, in order to reduce the Stand-by losses or to prevent the backflow of the flue gas e.g. in case of multi-served chimneys.

This European standard covers only flue dampers incorporated in a housing and installed inside a building. Flue dampers already tested together with system chimney products or other chimney components, e.g. flue liners, connecting flue pipes, are not covered by this standard.

This European standard also specifies the requirements for marking, manufacturers' instruction, product information, Assessment and Verification of Constancy of Performance (AVCP), cleaning and maintenance.

Dimovodne naprave - Oprema - 6. del: Čistilne odprtine - Zahteve in preskusne metode

Chimneys - Accessories - Part 6: Access components - Requirements and test methods

Osnova: EN 16475-6:2020

ICS: 91.060.40

This European Standard specifies the requirements and test methods for access components comprising a frame and a door or doors which provide access to the flue of a chimney for the purpose of inspection or cleaning.

Access components for higher nominal working temperature than 450 °C, positive pressure and wet applications are not covered by this standard.

The standard is limited to access components with a door opening area up to 0,27 m².

Products not freely ventilated are excluded from this standard.

This standard also specifies the requirements for marking, manufacturers' instruction, product information and evaluation of conformity.

Access components already tested together with system chimney products or other chimney components, e.g. flue liners, are not covered by this standard.

Prenosni aerosolni razpršilniki za gašenje požara

Portable aerosol dispensers for fire extinguishing purposes

Osnova: EN 16856:2020

ICS: 13.220.10

This draft European Standard specifies the characteristics, performance and test methods for extinguishing aerosol dispensers, in accordance with Directive 75/324/EEC, for fire extinguishing purposes. Requirements in this draft Standard are specified for products containing less than 1 kg or 1 l of extinguishing media, which can be expelled by the action of internal pressure and are intended to extinguish test fires of type A + B, or type A + F, or type A + B + F classes of EN 2. These extinguishing aerosol dispensers are intended to be used by untrained persons for domestic applications. They are not intended to be used on gas fires (class C) and metal fires (class D).

Requirements are specified for minimum performance in Annex I for extinguishing test fires of type A, type B and type F classes of EN 2, as appropriate.

Annex A gives the conditioning treatment to be applied to extinguishing aerosol dispensers prior to testing as described in Annex B to Annex K.

ICS: 29.240.30, 53.200

Dopolnilo A1:2020 je dodatek k standardu SIST EN 61850-7-2:2011.

Ta del IEC 61850 velja za komunikacijo ACSI za avtomatizacijo porabe. ACSI zagotavlja naslednje vmesnike abstraktne komunikacijske storitve:

a) abstraktna povezava, ki opisuje komunikacije med klientom in oddaljenim strežnikom za

- realno časovni dostop do podatkov in priklic;

- nadzor naprave;

- poročanje dogodkov in beleženje;

- nastavitev skupinskega nadzora;

- samo opisovanje naprav (slovar podatkov o napravah);

- tipiziranje podatkov in odkrivanje tipov podatkov ter

- prenos datotek.

b) Abstraktna povezava za hitro in zanesljivo distribucijo dogodkov sistema med aplikacijo v eni napravi in več oddaljenimi aplikacijami v različnih napravah (izdajatelj/naročnik) in za oddajanje vzorčnih merjenih vrednosti (izdajatelj/naročnik).

Komunikacijska omrežja in sistemi za avtomatizacijo porabe električne energije - 7-4. del: Osnovna komunikacijska struktura - Združljivi logični vozliščni in podatkovni razredi - Dopolnilo A1

Communication networks and systems for power utility automation - Part 7-4: Basic communication structure - Compatible logical node classes and data object classes

Osnova: EN 61850-7-4:2010/A1:2020

ICS: 29.240.30, 33.200

Dopolnilo A1:2020 je dodatek k standardu SIST EN 61850-7-4:2011.

Ta del IEC 61850 določa informacijski model naprav in funkcij, običajno povezanih s splošno uporabo glede na uporabe v sistemih za avtomatizacijo porabe (električne) energije. Prav tako vsebuje informacijski model naprav in funkcionalno povezanih uporab v razdelilnih postajah. Zlasti določa logična vozliščna imena in imena podatkovnih objektov za komunikacijo med inteligentnimi elektronskimi napravami (IED). To vsebuje razmerje med logičnimi vozlišči in podatkovnimi objekti. Imena logičnih vozlišč in podatkovnih objektov, določenih v tem dokumentu, so del modela razredov, predstavljenega v IEC 61850-7-1 in določenega v IEC 61850-7-2. Imena, določena v tem dokumentu, se uporabljajo za izgradnjo hierarhičnih referenčnih objektov uporabljenih za komunikacijo z IED v sistemih za avtomatizacijo porabe (električne) energije in zlasti z IED v razdelilnih postajah in v razdelilnih glavnih dovodnih kablih. V tem delu veljajo konvencije poimenovanja iz IEC 61850-7-2. Da se izognemo zasebnim, nekompatibilnim priponam, ta del določa normativna pravila poimenovanja za večkratne instance in zasebne, kompatibilne pripone razredov logičnih vozlišč (LN) in imen podatkovnih objektov. Vsaka definicija je osnovana na IEC 61850 ali na referenčnih dobro dokumentiranih javnih dokumentov. Ta del ne zagotavlja vadbenega materiala. Priporočeno je najprej prebrati dele IEC 61850-5 in IEC 61850-7-1, skupaj z IEC 61850-7-3 in IEC 61850-7-2. Ta standard se uporablja za opis modelov naprav in funkcij razdelilnih postaj in opreme glavnih dovodnih kablov. Koncepti, določeni v tem standardu, prav tako veljajo za opisovanje modelov naprav in funkcij za:

- izmenjavo podatkov razdelilne postaje do razdelilne postaje,
- izmenjavo podatkov razdelilne postaje do nadzornega centra,
- izmenjavo podatkov elektrarne do nadzornega centra,
- izmenjavo podatkov za porazdeljeno proizvodnjo,
- izmenjava podatkov za porazdeljeno avtomatizacijo ali
- izmenjavo podatkov za merjenje.

SIST EN 61850-8-1:2011/A1:2020**2020-06 (po) (en)****141 str. (P)**

Komunikacijska omrežja in sistemi za avtomatizacijo porabe električne energije - 8-1. del: Preslikava posebne komunikacijske storitve (SCSM) - Preslikave v MMS (ISO 9506-1 in ISO 9506-2) in v ISO/IEC 8802-3 - Dopolnilo A1

Communication networks and systems for power utility automation - Part 8-1: Specific communication service mapping (SCSM) - Mappings to MMS (ISO 9506-1 and ISO 9506-2) and to ISO/IEC 8802-3

Osnova: EN 61850-8-1:2011/A1:2020

ICS: 53.200, 29.240.50

Dopolnilo A1:2020 je dodatek k standardu SIST EN 61850-8-1:2011.

Ta del IEC 61850 določa metodo izmenjave časovno kritičnih in časovno nekritičnih podatkov prek lokalnih omrežij s preslikavo ACSI v okvire MMS in ISO/IEC 8802-3. Storitve in protokol MMS so določeni za delovanje v vseh komunikacijskih profilih, združljivih z OST in TCP. Z uporabo MMS se zagotovi podpora centraliziranih in porazdeljenih arhitektur. Ta standard vključuje izmenjavo prikazov podatkov v realnem času, nadzornih operacij, poročevalnih obvestil.

Določa preslikavo objektov in storitev ACSI (vmesnik abstraktne komunikacijske storitve, IEC 61850-7-2) v okvire MMS (specifikacija industrijskega sporočanja, ISO 9506) in ISO/IEC 8802-3.

Ta standard določa tudi preslikavo časovno kritičnih izmenjav informacij v protokol ne-MMS. Semantike protokola so navedene v IEC 61850-7-2. Vsebuje sintaksos protokola, definicijo, preslikavo v formate okvirov ISO/IEC 8802-3 in vse pomembne postopke, specifične za uporabo ISO/IEC 8802-3.

Preslikava ACSI v MMS opredeljuje, kako se izvajajo koncepti, objekti in storitve ACSI s koncepti, objekti in storitvami MMS. Ta preslikava omogoča interoperabilnost med funkcijami, ki jih izvajajo različni proizvajalci.

Ta del IEC 61850 opredeljuje standardizirano metodo z uporabo storitev ISO 9506 pri izvajanju izmenjave podatkov. Za storitve ACSI, opredeljene v IEC 61850-7-2, ki se ne preslikajo v MMS, ta del opredeljuje dodatne protokole. Opisuje realne javne pripomočke v zvezi z zunanje vidljivimi podatki in lastnosti pri uporabi objektne usmerjenega pristopa. Objekti so po svoji naravi abstraktni in se lahko uporabljajo pri zelo različnih aplikacijah. Uporaba te preslikave ni omejena le na uporabo pri javnih komunikacijah.

Ta del IEC 61850 podaja preslikave za storitve in objekte, določene v IEC 61850-7-2, IEC 61850-7-3 in IEC 61850-7-4.

SIST EN 61850-9-2:2012/A1:2020**2020-06 (po) (en)****27 str. (G)**

Komunikacijska omrežja in sistemi za avtomatizacijo porabe električne energije - 9-2. del: Preslikave posebne komunikacijske storitve (SCSM) - Vzorčne/odčitane vrednosti po ISO/IEC 8802-3 - Dopolnilo A1

Communication networks and systems for power utility automation - Part 9-2: Specific communication service mapping (SCSM) - Sampled values over ISO/IEC 8802-3

Osnova: EN 61850-9-2:2011/A1:2020

ICS: 29.240.30, 53.200

Dopolnilo A1:2020 je dodatek k standardu SIST EN 61850-9-2:2012.

Ta del standarda IEC 61850 določa preslikave posebne komunikacijske storitve (SCSM) za prenos vzorčnih/odčitanih vrednosti v skladu z abstraktno specifikacijo iz standarda IEC 61850-7-2. To je preslikava abstraktnega modela na mešani sklad z neposrednim dostopom do povezave iz standarda ISO/IEC 8802-3 za prenos vzorcev v kombinaciji s standardom IEC 61850-8-1. Vse preslikave posebne komunikacijske storitve so sestavljene iz treh delov: – specifikacija uporabljenega komunikacijskega sklada, – preslikava abstraktnih specifikacij iz serije IEC 61850-7 o realnih elementih uporabljenega sklada in – specifikacija izvajanja funkcionalnosti, ki je ne zajema uporabljeni sklad.

Nizkonapetostne stikalne in krmilne naprave - 5-2. del: Krmilne naprave in stikalni elementi - Približevalna stikala (IEC 60947-5-2:2019)

Low-voltage switchgear and controlgear - Part 5-2: Control circuit devices and switching elements - Proximity switches (IEC 60947-5-2:2019)

Osnova: EN IEC 60947-5-2:2020

ICS: 29.130.20

EN-IEC 60947-5-2 applies to inductive and capacitive proximity switches that sense the presence of metallic and/or non-metallic objects, ultrasonic proximity switches that sense the presence of sound reflecting objects, photoelectric proximity switches that sense the presence of objects and non-mechanical magnetic proximity switches that sense the presence of objects with a magnetic field. Products covered by the scope of this document are not subjected to defined behaviours under fault conditions. Proximity switches with defined behaviour are covered by IEC 60947-5-3 and have to fulfil additional requirements. These proximity switches are self-contained, have semiconductor switching element(s) and are intended to be connected to circuits, the rated voltage of which does not exceed 250 V 50 Hz/60 Hz AC RMS or 300 V DC. Examples of typical applications for in-scope products: - factory automation and machinery industry; - logistic and packaging industry; - conveyor belts, lifts; - process industry; - power plants. Special applications (e.g. corrosive atmosphere) can cause additional requirements. This document is not intended to cover proximity switches with analogue outputs. The object of this document is to state for proximity switches: - definitions; - classification; - characteristics; - product information; - normal service, mounting and transport conditions; - constructional and performance requirements; - tests to verify rated characteristics. Products covered by the scope of this document are expected to be selected, installed, and maintained by skilled personnel only.

SIST/TC SPN Storitve in protokoli v omrežjih**SIST EG 203 499 V1.1.1:2020****2020-06 (po) (en)****102 str. (N)**

Človeški dejavniki (HF) - Uporabniško usmerjena terminologija za obstoječe in prihodnje naprave, storitve in aplikacije IKT

Human Factors (HF) - User-centred terminology for existing and upcoming ICT devices, services and applications

Osnova: ETSI EG 203 499 V1.1.1 (2019-08)

ICS: 35.040.01

The present document aims at further simplifying end-user access to ICT devices, services, and applications by providing recommended terms for basic and commonly-used ICT-related objects and activities, limited to those terms that end users are commonly exposed to. Recommended terms are provided in five languages: English, French, German, Italian, and Spanish (as spoken in their respective European countries).

The recommended terms apply to mobile ICT devices and mobile applications (whether they are standalone or whether they provide access to related services) commonly found in mobile ICT devices (most of the recommended terms are applicable to both mobile and stationary devices, services, and applications). The recommended terms are applicable to

the User Interface (UI) design for a product as well as that of any user documentation accompanying it. User requirements and available results of standardization work have been considered and integrated in the present document, providing implementation-oriented guidance. Wherever possible, a Design-for-All approach has been adopted, taking functional abilities of users, including elderly users and users with cognitive, physical, or sensory limitations into account.

The present document does not provide design guidance, nor does it intend to restrict the ability of market players to further improve and develop their terminals and services. Neither does it intend to limit their options to trademark user interface elements or profile the user experience of brand-specific user interface implementations as a competitive edge.

The present document defines specific QCStatement for the qcStatements extension as defined in IETF RFC 3739 [2], clause 3.2.6, including requirements for their use in EU qualified certificates. Some of these QCStatements can be used for other forms of certificate.

The QCStatements defined in the present document can be used in combination with any certificate profile, either defined in ETSI EN 319 412-2 [i.2], ETSI EN 319 412-3 [i.5] and ETSI EN 319 412-4 [i.6], or defined elsewhere.

The QCStatements defined in clause 4.3 may be applied to regulatory environments outside the EU. Other requirements specified in clause 4 are specific to Regulation (EU) No 910/2014 [i.8] but may be adapted for other regulatory environments.

Oprema in podlage otroških igrišč - 7. del: Navodila za vgradnjo, nadzor, vzdrževanje in delovanje

Playground equipment and surfacing - Part 7: Guidance on installation, inspection, maintenance and operation

Osnova: EN 1176-7:2020

ICS: 97.200.40

This document is applicable to playground equipment, surfacing and ancillary items, eg., gates, fences, benches, bins, shades, etc.

Note 1 The scope of the inspection and inclusion of the ancillary items will vary from country to country

Note 2 Ancillary items are not included in EN 1176 and are not assessed for compliance with EN 1176.

This document establishes requirements on the installation, inspection, maintenance and operation of playground equipment and surfacing around the equipment. It is intended for use by playground operators (see definitions 3.4) to assist them in developing an inspection and maintenance regime for each playground.

Energijske lastnosti stavb - Urniki in pogoji uporabe stavbe, con in prostorov za izračun rabe energije - 1. del: Nestanovanjske stavbe

Energy performance of buildings – Schedule and condition of building, zone and space usage for energy calculation – Part 1: Non-residential buildings

Osnova: ISO 18523-1:2016

ICS: 91.040.01, 91.120.10

ISO 18523-1:2016 specifies the formats to present schedule and condition of building, zone and space usage, which is to be referred to as input data of energy calculations for non-residential buildings.

The schedule and condition include schedules of occupancy, operation of technical building systems, ventilation rate, hot water usage and internal heat gains due to occupancy, lighting and equipment.

ISO 18523-1:2016 also gives categories of building, zone and space according to differentiating schedule and condition.

Depending on necessary minuteness of the energy calculation, different levels of schedule and condition from the view point of time and space averaging are specified.

The values and categories for the schedule and condition are given in annexes for more information for the application when the users of this document do not have detailed information on the values and categories for the schedule and condition.

The schedule and condition in this document is basically different from assumptions in order to determine the size of technical building systems in the process of design, where possible largest values are to be assumed. Instead, most usual and average values, which are assumed for the building energy calculation, are dealt with in this document.

SIST ISO 18523-2:2020

Energijske lastnosti stavb - Urniki in pogoji uporabe stavbe, con in prostorov za izračun rabe energije - 2. del: Stanovanjske stavbe

Energy performance of buildings – Schedule and condition of building, zone and space usage for energy calculation – Part 2: Residential buildings

Osnova: ISO 18523-2:2018

ICS: 91.040.30, 91.120.10

ISO 18523-2:2018 specifies the formats to present the schedule and conditions of zone and space usage (referred to as input data of energy calculations) for residential buildings.

The schedule and conditions include schedules of occupancy, operation of technical building systems, ventilation rates, hot water usage, usage of appliances and internal heat gains due to occupancy, lighting and appliances. The schedule and conditions for lighting are applicable to fixed installed lighting fixtures.

ISO 18523-2:2018 also gives categories of residential building, zone and space according to differentiating schedule and condition. For residential buildings or its housing units which contain any category of space or zone of non-residential buildings, ISO 18523-1 applies.

Depending on necessary minuteness of the energy calculation, different levels of schedule and condition from the view point of time and space averaging are specified.

The values and categories for the schedule and condition are included informatively.

NOTE The schedule and condition in this document is basically different from assumptions in order to determine the size of technical building systems in the process of design, where possible largest or smallest values are assumed. Instead, most usual and average values, which are assumed for the building energy calculation, are dealt with in this document.

SIST/TC VGA Varnost električnih aparatov za gospodinjstvo in podobne namene**SIST EN 60335-2-17:2013/A1:2020****2020-06 (po) (en) 15 str. (D)**

Gospodinjski in podobni električni aparati - Varnost - 2-17. del: Posebne zahteve za grelne odeje, blazine in podobne zvijave grelne aparate - Dopolnilo A1

Household and similar electrical appliances - Safety - Part 2-17: Particular requirements for blankets, pads, clothing and similar flexible heating appliances

Osnova: EN 60335-2-17:2013/A1:2020

ICS: 13.120, 97.030

Dopolnilo A1:2020 je dodatek k standardu SIST EN 60335-2-17:2013.

Ta mednarodni standard obravnava varnost električnih grelnih odej, blazin, oblačil in podobnih zvijavih grelnih aparatov, ki segrevajo posteljo ali telo, za gospodinjsko ali podobno rabo, pri čemer njihova nazivna napetost ni višja od 250 V. Ta standard se uporablja tudi za krmilne enote, ki so priložene aparatu. Področje uporabe tega standarda zajema aparate, ki niso namenjeni za običajno gospodinjsko uporabo, vendar so lahko vir nevarnosti za javnost, kot so aparati, namenjeni za uporabo v kozmetičnih salonih ali s strani oseb pri nizkih okoljskih temperaturah. Zahteve in preskušanje za oblačila so podana v dodatku CC. Ta standard v največji možni meri obravnava splošne nevarnosti, ki jih predstavljajo aparati ter s katerimi se srečujejo osebe doma in v okolini doma. Vendar na splošno ne upošteva

- oseb (vključno z otroki), ki zaradi • fizičnih, čutilnih ali duševnih zmožnosti ali zaradi
• neizkušenosti in neznanja aparata ne morejo varno uporabljati brez nadzora ali navodil;
- otrok, ki se z napravo igrajo.

Electric Motor-Operated Hand-Held Tools, Transportable Tools and Lawn and Garden Machinery - Safety - Part 4-1: Particular requirements for chain saws (IEC 62841-4-1:2017)

Osnova: EN 62841-4-1:2020

ICS: 65.060.80, 25.080.60, 25.140.20

EN-IEC 62841-4-1 applies to chain saws for cutting wood and designed for use by one person. This standard does not cover chain saws designed for use in conjunction with a guide-plate and riving knife or in any other way such as with a support or as a stationary or transportable machine. This standard does not apply to - chain saws for tree service as defined in ISO 11681-2; or - pole-mounted pruners. The chain saws covered by this standard are designed only to be operated with the right hand on the rear handle and the left hand on the front handle.

Nuklearne elektrarne - Merilni, nadzorni in elektroenergetski sistemi - Zahteve za statične neprekinjene enosmerne in izmenične napajalne sisteme (IEC 61225:2019)

Nuclear power plants - Instrumentation, control and electrical power systems - Requirements for static uninterruptible DC and AC power supply systems (IEC 61225:2019)

Osnova: EN IEC 61225:2020

ICS: 27.120.20

This document specifies the performance and the functional characteristics of the low voltage static uninterruptible power supply (SUPS) systems in a nuclear power plant and, for applicable parts, in general for nuclear facilities. An uninterruptible power supply is an electrical equipment which draws electrical energy from a source, stores it and maintains supply in a specified form by means inside the equipment to output terminals. A static uninterruptible power supply (SUPS) has no rotating parts to perform its functions.

The specific design requirements for the components of the power supply system are covered by IEC standards and standards listed in the normative references and are otherwise outside the scope of this document.

Tehnologije gorivnih celic - 3-100. del: Nepremični elektroenergetski sistemi z gorivnimi celicami - Varnost (IEC 62282-3-100:2019)

Fuel cell technologies - Part 3-100: Stationary fuel cell power systems - Safety (IEC 62282-3-100:2019)

Osnova: EN IEC 62282-3-100:2020

ICS: 27.070

This part of IEC 62282 applies to stationary packaged, self-contained fuel cell power systems or fuel cell power systems comprised of factory matched packages of integrated systems which generate electricity through electrochemical reactions.

This document applies to systems intended for electrical connection to mains direct, or with a transfer switch, or to a standalone power distribution system;

intended to provide AC or DC power;

with or without the ability to recover useful heat;

intended for operation on the following input fuels:

natural gas and other methane rich gases derived from renewable (biomass) or fossil fuel sources, for example, landfill gas, digester gas, coal mine gas;

fuels derived from oil refining, for example, diesel, gasoline, kerosene, liquefied petroleum gases such as propane and butane;

alcohols, esters, ethers, aldehydes, ketones, Fischer-Tropsch liquids and other suitable hydrogen-rich organic compounds derived from renewable (biomass) or fossil fuel sources, for example, methanol, ethanol, di-methyl ether, biodiesel;

hydrogen, gaseous mixtures containing hydrogen gas, for example, synthesis gas, town gas.

This document does not cover:

- micro fuel cell power systems;
- portable fuel cell power systems;
- propulsion fuel cell power systems.

NOTE For special applications such as “marine auxiliary power”, additional requirements can be given by the relevant marine ship register standard.

This document is applicable to stationary fuel cell power systems intended for indoor and outdoor commercial, industrial and residential use in non-hazardous areas.

This document contemplates all significant hazards, hazardous situations and events, with the exception of those associated with environmental compatibility (installation conditions), relevant to fuel cell power systems, when they are used as intended and under the conditions foreseen by the manufacturer.

This document deals with conditions that can yield hazards on the one hand to persons, and on the other to damage outside the fuel cell power system only. Protection against damage to the fuel cell power system internals is not addressed in this document, provided it does not lead to hazards outside the fuel cell power system.

Podatki (IEC 62435-3:2020)

Electronic components - Long-term storage of electronic semiconductor devices - Part 3: Data (IEC 62435-3:2020)

Osnova: EN IEC 62435-3:2020

ICS: 31.080.01

This part of IEC 62435 describes the aspects of data storage that are necessary for successful use of electronic components being stored after long periods while maintaining traceability or chain of custody. It defines what sort of data needs to be stored alongside the components or dies and the best way to do so in order to avoid losing data during the storage period. As defined in this document, long-term storage refers to a duration that can be more than twelve months for products scheduled for long duration storage. Philosophy, good working practice, and general means to facilitate the successful long-term-storage of electronic components are also addressed.

NOTE In IEC 62435 (all parts), the term "components" is used interchangeably with dice, wafers, passives and packaged devices.

Podpora oprema na tleh za letalski promet - Posebne zahteve - 15. del: Vlečni traktorji za prtljago in opremo

Aircraft ground support equipment - Specific requirements - Part 15: Baggage and equipment tractors

Osnova: EN 12312-15:2020

ICS: 49.100

This European Standard specifies the technical requirements to minimise the hazards listed in Clause 4 which can arise during the commissioning, the operation and the maintenance of baggage and equipment tractors when used as intended, including misuse reasonably foreseeable by the manufacturer, when carried out in accordance with the specifications given by the manufacturer or his authorised representative. It also takes into account some requirements recognised as essential by authorities, aircraft and ground support equipment (GSE) manufacturers as well as airlines and handling agencies.

This European Standard applies to self propelled baggage and equipment tractors with driver accommodation.

This European Standard does not apply to pedestrian controlled equipment.

This European Standard deals with vibrations which are considered as significant. It does not establish requirements for noise. Vibration measurements are dealt with in EN 1915-3. Noise measurements and reduction are dealt with in EN 1915-4.

This part of EN 12312 is not applicable to baggage and equipment tractors manufactured before the date of its publication.

This part of EN 12312 when used in conjunction with EN 1915-1, EN 1915-2, EN 1915-3 and EN 1915-4 provides the requirements for baggage and equipment tractors.

Lastnosti premično lociranih javljalknikov puščanja in fiksnih detektorjev plina za vsa hladilna sredstva

Performance of portable locating leak detectors and of fixed gas detectors for all refrigerants

Osnova: EN 14624:2020

ICS: 13.320, 27.200, 71.100.45

This document specifies the requirements for portable locating leak detectors and fixed gas detectors for all refrigerants.

Locating detectors used in factories for manufacturing processes are not included in the Scope of prEN 14624.

1.1 Product application:

This document applies to different applications and environments such as plant and machine rooms, production rooms, cold rooms, supermarkets, occupied spaces like offices and hotels.

1.2 Product performance:

This document specifies minimum requirements for sensitivity, operating range, response time, environmental conditions and cross sensitivity from interference gases.

1.3 Product installation:

This document gives guidance of suitable technology, location of detection points, interconnection with secondary equipment (e.g. initiation of mechanical ventilation, personnel warning, equipment shutdown).

1.4 Service and maintenance:

This document gives guidance for service and maintenance: Sensors and mechanical equipment have a limited operating life and require regular performance verification to ensure conformity.

Oprema za zimska vzdrževalna dela - Posipalniki in škropilniki - 1. del: Splošne zahteve in definicije

Winter maintenance equipment - Spreading and spraying machines - Part 1: General requirements and definitions

Osnova: EN 15597-1:2020

ICS: 43.160

This European Standard determines the demands on design and construction of bulk spreaders, trailer spreaders and towed spreaders with speed related spreading for winter service. At the same time, information is given on the minimum content required for operating manuals.

The standard is valid for machines which are used to spread the following media:

- a) spreading not pre-wetted and pre-wetted thawing media;
- b) abrasive spreading agents;
- c) brine.

The following points are not covered by this standard:

- requirements for registration and approval;
- requirements made by automobile manufacturers;
- requirements on safety - these are dealt with in EN 13021.

Zagotavljanje kakovosti proizvodov v vesoljski tehniki - Zagotavljanje kakovosti

Space product assurance - Quality assurance

Osnova: EN 16602-20:2020

ICS: 03.120.99, 49.140

This Standard defines the quality assurance (QA) requirements for the establishment and implementation of a Quality Assurance programme for products of space projects. Discipline related qualification activities are complemented in standards specific to those disciplines (e.g. ECSS-E-ST-32-01 for fracture control).

For software quality assurance, the software product assurance standard, ECSS-Q-ST-80 is applicable. This Standard is applicable to all space projects.

This standard may be tailored for the specific characteristic and constraints of a space project in conformance with ECSS-S-ST-00.

For the tailoring of this standard the following information is provided:

- A table providing the pre-tailoring per "Product types" in clause 6
- A table providing the pre-tailoring per "Project phase" in Annex J

SIST EN 16602-70-17:2020

Zagotavljanje kakovosti proizvodov v vesoljski tehniki - Preskušanje trajnosti prevlek in površinske apreture

Space product assurance - Durability testing of coatings and surface finishes

Osnova: EN 16602-70-17:2020

ICS: 03.120.99, 49.140, 49.040

This standard specifies requirements for the durability testing of coatings most commonly used for space applications, i.e.:

- Thin film optical coatings
- Thermo-optical and thermal control coatings (the majority are paints, metallic deposits and coatings for stray light reduction)
- Metallic coatings for other applications (RF, electrical, corrosion protection)

This standard covers testing for both ground and in-orbit phases of a space mission, mainly for satellite applications.

This standard applies to coatings within off the shelf items

This standard specifies the types of test to be performed for each class of coating, covering the different phases of a space project (evaluation, qualification and acceptance)

This standard does not cover:

- The particular qualification requirements for a specific mission
- Specific applications of coatings for launchers (e.g. high temperature coatings)
- Specific functional testing requirements for the different coating classes
- Test requirements for long term storage
- Solar cell cover glass coatings
- Surface treatments and conformal coatings applied on EEE parts

SIST EN 16603-50-12:2020

Vesoljska tehnika - SpaceWire - Povezave, vozlišča, usmerjevalniki in omrežja

Space engineering - SpaceWire - Links, nodes, routers and networks

Osnova: EN 16603-50-12:2020

ICS: 49.140

This Standard specifies the physical interconnection media and data communication protocols to enable the reliable sending of data at high-speed (between 2 Mb/s and 400 Mb/s) from one unit to another. SpaceWire links are full-duplex, point-to-point, serial data communication links.

The scope of this Standard is the physical connectors and cables, electrical properties, and logical protocols that comprise the SpaceWire data link. SpaceWire provides a means of sending packets of information from a source node to a specified destination node. SpaceWire does not specify the contents of the packets of information.

This Standard covers the following protocol levels:

- Physical level: Defines connectors, cables, cable assemblies and printed circuit board tracks.
- Signal level: Defines signal encoding, voltage levels, noise margins, and data signalling rates.
- Character level: Defines the data and control characters used to manage the flow of data across a link.
- Exchange level: Defines the protocol for link initialization, flow control, link error detection and link error recovery.
- Packet level: Defines how data for transmission over a SpaceWire link is split up into packets.
- Network level: Defines the structure of a SpaceWire network and the way in which packets are transferred from a source node to a destination node across a network. It also defines how link errors and network level errors are handled.

This Standard may be tailored for the specific characteristics and constraints of a space project in conformance with ECSS-S-ST-00.

Aerospace series - Bearing, spherical, plain, in corrosion resisting steel - Narrow series - Dimensions and loads - Inch series

Osnova: EN 6046:2020

ICS: 21.100.01, 49.035

This European standard specifies the characteristics of inch based spherical plain bearing, metal to metal, in corrosion resisting steel, narrow series.

They are intended for use in fixed or moving parts of the aircraft structure and their control mechanisms.

They shall be used in the temperature range as determined by the grease capability as below:

- code A: grease as per MIL-PRF-23827 Type I, operating temperature range -73°C to 121°C ;
- code B: grease as per MIL-PRF-81322, operating temperature range -54°C to 177°C .

The range of application for bearings lubricated with grease per code A is limited to 121°C . In both cases the spherical surface of the outer or inner ring have to be provided with a dry-film lubricant as per MIL-PRF-46010 or equivalent (anti-seizing protection).

Mala plovila - Zračenje bencinskega motorja in/ali prostorov za bencinski tank (ISO 11105:2020)

Small craft - Ventilation of petrol engine and/or petrol tank compartments (ISO 11105:2020)

Osnova: EN ISO 11105:2020

ICS: 47.020.20, 47.080

This document specifies requirements for the ventilation of petrol engine and petrol tank compartments in small craft having petrol engines for propulsion, electrical generation or mechanical power, to prevent the accumulation of explosive gases in these compartments. Personal watercraft are not covered in this document.

SIST EN ISO 17409:2020

SIST EN ISO 17409:2017

49 str. (I)

Cestna vozila na električni pogon - Prevodni prenos moči - Varnostne zahteve (ISO 17409:2020)

Electrically propelled road vehicles - Conductive power transfer - Safety requirements (ISO 17409:2020)

Osnova: EN ISO 17409:2020

ICS: 43.120

This document specifies electric safety requirements for conductive connection of electrically propelled road vehicles to external electric circuits. External electric circuits include external electric power supplies and external electric loads. This document provides requirements for the charging modes 2, 3, 4, as defined in IEC 61851-1, and reverse power transfer. For mode 4, this document provides requirements regarding the connection to an isolated DC EV charging station according to IEC 61851-23.

NOTE 1 This edition does not provide requirements for mode 1.

NOTE 2 External electric circuits are not part of the vehicle.

This document applies to the on-board sections of vehicle power supply circuits. It applies also to dedicated power supply control functions used for the connection of the vehicle to an external electric circuit.

It does not provide comprehensive safety information for manufacturing, maintenance and repair personnel.

NOTE 3 ISO 6469-3 provides general electrical safety requirements for electrically propelled road vehicles.

NOTE 4 With this edition of this document the limitation of y-capacitance for protection against electric shock under single failure conditions is no longer applicable as a fault protection provision when the vehicle has a conductive DC connection to an external electric circuit.

SIST EN ISO 20321:2020

Petrokemična industrija ter industrija za predelavo nafte in zemeljskega plina - Varnost strojev - Električna dvigala (ISO 20321:2020)

Petroleum, petrochemical and natural gas industries - Safety of machineries - Powered elevators (ISO 20321:2020)

Osnova: EN ISO 20321:2020

ICS: 53.020.01, 75.180.10, 13.110

This document specifies general safety requirements for the design, testing and production of powered elevators. The requirements are applicable for on- and off-shore applications of such elevators in the petroleum, petrochemical and natural gas industries.

This document does not cover any other type of elevator. It is not applicable to the following types of products: lifting nubbins, lifting plugs, lifting subs, internal gripping devices, equipment for lifting tubular from and onto a vessel. This list is not exclusive.

SIST EN ISO 20361:2019/A11:2020

2020-06 (po) (en;fr;de) 4 str. (A)

Črpalki za tekočine in črpalni agregati - Preskusni postopki za merjenje hrupa - Razreda točnosti 2 in 3 - Dopolnilo A11 (ISO 20361:2019)

Liquid pumps and pumps units - Noise test code - Grades 2 and 3 of accuracy (ISO 20361:2019)

Osnova: EN ISO 20361:2019/A11:2020

ICS: 23.080, 17.140.20

Dopolnilo A11:2020 je dodatek k standardu SIST EN ISO 20361:2019.

Ta dokument določa vse potrebne informacije za učinkovito določanje, objavljanje in preverjanje emisij hrupa črpalk za tekočine in črpalnih agregatov, ki bo potekalo pod standardiziranimi pogoji (glej točko 4.1). Določa preskusne postopke za merjenje hrupa ter zahteve za delovanje in priključitev, ki se uporabljajo za preskus. Lastnosti emisij hrupa vključujejo ravni emisij zvočnega tlaka na določenih položajih in raven zvočne moči. Določanje teh količin je potrebno za: - objavljanje vrednosti emisij hrupa; in - namen zvočne zaščite pri viru v fazi projektiranja. Določanje teh količin je prav tako potrebno za primerjavo emisij hrupa različnih črpalk za tekočine na trgu. Uporaba tega dokumenta zagotavlja ponovljivost določanja značilnosti zračnih emisij hrupa v določenih mejah, ki jih določa razred točnosti uporabljeni osnovne metode merjenja zračnih emisij hrupa. Metode merjenja hrupa, ki jih določa ta dokument, so inženirske metode (razred 2) in metode raziskovanja (razred 3). Ta dokument ne zajema karakterizacije strukturnega zvoka in vodnega hrupa, ki ju proizvajajo črpalki za tekočine.

Forenzične znanosti - 2. del: Prepoznavanje, snemanje, zbiranje, prevoz in shranjevanje predmetov (ISO 21043-2:2018)

Forensic sciences - Part 2: Recognition, recording, collecting, transport and storage of items (ISO 21043-2:2018)

Osnova: EN ISO 21043-2:2020

ICS: 07.140

This document specifies requirements for the forensic process focusing on recognition, recording, collection, transport and storage of items of potential forensic value. It includes requirements for the assessment and examination of scenes but is also applicable to activities that occur within the facility. This document also includes quality requirements.

This document is not applicable to procedures for the recovery of data from digital storage media which is covered by ISO/IEC 27037. However, the storage medium itself can yield additional items of forensic value (e.g. fingerprints or DNA).

Annex D shows the applicability of this document to the forensic process.

SIST EN ISO 7096:2020

Stroji za zemeljska dela - Laboratorijski postopek za ovrednotenje vibracij voznikovega sedeža (ISO 7096:2020)

Earth-moving machinery - Laboratory evaluation of operator seat vibration (ISO 7096:2020)

Osnova: EN ISO 7096:2020

ICS: 53.100, 13.160

1.1 This document specifies, in accordance with ISO 10326-1:2016, a laboratory method for measuring and evaluating the effectiveness of the seat suspension in reducing the vertical whole-body vibration transmitted to the operator of earth-moving machines at frequencies between 1 Hz and 20 Hz. It also specifies acceptance criteria for application to seats on different machines.

1.2 This document is applicable to operator seats used on earth-moving machines as defined in ISO 6165.

1.3 This document defines the input spectral classes required for the following earth-moving machines.

Each class defines a group of machines having similar vibration characteristics:

- rigid-frame dumpers >4 500 kg operating mass;
- articulated-frame dumpers;
- scrapers without axle or frame suspension¹⁾;
- wheeled loaders >4 500 kg operating mass;
- graders;
- wheeled dozers;
- soil compactors;
- backhoe loaders;
- crawler dumpers;
- crawler loaders;
- crawler-dozers ≤50 000 kg operating mass²⁾;
- compact dumpers ≤4 500 kg operating mass;
- wheeled compact loaders ≤4 500 kg operating mass;
- skid-steer loaders, wheeled ≤4 500 kg and tracked ≤6 000 kg operating mass.

1.4 The following machines impart sufficiently low vertical vibration inputs at frequencies between 1 Hz and 20 Hz to the seat during operation that these seats do not require suspension for the attenuation of transmitted vibration:

- excavators, including walking excavators and cable excavators³⁾;
- trenchers;
- landfill compactors;

- non-vibratory rollers, except soil compactors;
- vibratory rollers, except soil compactors;
- pipelayers;
- horizontal directional drills (HDD).

1.5 The tests and criteria defined in this document are intended for operator seats used in earthmoving machines of conventional design.

NOTE Other tests can be appropriate for machines with design features that result in significantly different vibration characteristics.

1.6 Vibration which reaches the operator other than through the seat, for example that sensed by the operator's feet on the platform or control pedals or by the operator's hands on the steering-wheel, is not covered.

Specifikacija formatov datotek za 3D-tisk (AMF), različica 1.2 (ISO/ASTM 52915:2020)

Specification for additive manufacturing file format (AMF) Version 1.2 (ISO/ASTM 52915:2020)

Osnova: EN ISO/ASTM 52915:2020

ICS: 35.240.50, 25.030

This document provides the specification for the Additive Manufacturing File Format (AMF), an interchange format to address the current and future needs of additive manufacturing technology. This document specifies the requirements for the preparation, display and transmission for the AMF. When prepared in a structured electronic format, strict adherence to an extensible markup language (XML)[1] schema supports standards-compliant interoperability.

NOTE A W3C XML schema definition (XSD) for the AMF is available from ISO from <http://standards.iso.org/iso/52915> and from ASTM from www.astm.org/MEETINGS/images/amf.xsd. An implementation guide for such an XML schema is provided in Annex A.

It is recognized that there is additional information relevant to the final part that is not covered by the current version of this document. Suggested future features are listed in Annex B.

This document does not specify any explicit mechanisms for ensuring data integrity, electronic signatures and encryptions.

SIST-TS CEN/TS 15150:2020

SIST-TS CEN/TS 15150:2007

Poštne storitve - Infrastruktura za elektrotehnične zaznamke pri frankiranju (DPM) - Informacije v podporo uporabi DPM

Postal services - DPM infrastructure - Messages supporting DPM applications

Osnova: CEN/TS 15150:2020

ICS: 35.240.69, 03.240

This document specifies the information exchanges between various parties' infrastructures that take place in support of DPM applications. It complements standards that address the design, security, applications and readability of Digital Postage Marks.

The following items will be addressed by this document:

- identification of parties participating in exchanges of information described by this document;
- identification of functions (interactions, use cases);
- definition of parties' responsibilities in the context of above functions;
- definition of messages between parties: message meaning and definition of communication protocols to support each function;
- definition of significant content (payload) for each message;
- security mechanisms providing required security services, such as authentication, privacy, integrity and non-repudiation.

This document does not address:

- design of DPM supporting infrastructure for applications internal to providers and carriers;
- design of DPM devices and applications for applications internal to end-users.

NOTE Although there are other communications between various parties involved in postal communications, this document covers only DPM-related aspects of such communications.

SIST-TS CEN/TS 17441:2020

Laboratorijska oprema - Sistemi prezračevanja v laboratorijih

Laboratory installations - Ventilation systems in laboratories

Osnova: CEN/TS 17441:2020

ICS: 91.140.30, 71.040.10

This document applies for the planning, design, installation and commissioning of ventilation systems in laboratories. It also applies for scientific classrooms in schools when equipped with a ventilation system. The application of this document depends not on the term laboratory in its narrower sense but this document also applies also for laboratory-related rooms in which work with dangerous or health hazardous substances is performed.

Obvestilo o prevodih že sprejetih slovenskih nacionalnih standardov

S to objavo vas obveščamo, da so bili izdani prevodi naslednjih slovenskih nacionalnih standardov, ki so bili že sprejeti v tujem jeziku. Prevod pomeni le jezikovno različico predhodno izdanega slovenskega dokumenta. Standard je na voljo v standardoteki SIST.

SIST/TC LLZ Les, lesni izdelki in zaščita lesa

SIST EN 14342:2013

2013-12 (pr) (sl) 55 str. (SH)

Lesene talne obloge - Lastnosti, vrednotenje skladnosti in označevanje

Woodflooring - Characteristics, evaluation of conformity and marking

Osnova: EN 14342:2013

ICS: 79.080, 97.150

V tem evropskem standardu so opredeljene in specificirane ustreerne lastnosti in zahteve za ravne površinske lesene talne obloge in parkete ter primerne preskusne metode za ugotavljanje njihove primernosti za notranjo uporabo kot talne obloge, vključno z zaprtimi prostori javnega prevoza. Evropski standardi za posebne lesene talne obloge in parkete, na katere se ta standard navezuje ter ki navajajo definicije proizvodov in zahteve glede dimenzijskih toleranc, vključujejo:

- masivne parketne deščice z utorom in peresom (EN 13226),
- masivni tanki parket (EN 13227),
- masivne lesene talne obloge, vključno s kockami za sisteme zapore (EN 13228),
- mozaične parketne elemente (EN 13488),
- večslojne parketne elemente (EN 13489),
- masivne predsestavljeni deski listavcev (EN 13629),
- masivne talne deske iglavcev (EN 15990),
- furnirane talne obloge (EN 14354),
- parket iz masivnega lesa – pokončne lamele, prečne lamele in modularne kocke (kladice) (EN 14761).

Ta evropski standard se lahko uporablja tudi za druge lesene talne obloge in parkete poleg opisanih v gornjih standardih. Vendar ne specificira nobenih zahtev v zvezi z dimenzijskimi tolerancami takih proizvodov.

Ta evropski standard določa tudi vrednotenje skladnosti ter zahteve za označevanje lesenih talnih oblog in parketov.

Ta evropski standard zajema lesene talne obloge in parkete, ki so lahko obdelani ali neobdelani za izboljšanje odziva na ogenj in njihove odpornosti proti biološkim škodljivcem.

Ta evropski standard se ne uporablja za:

- lesene talne obloge in parkete, izdelane s poudarkom na večji taktilnosti in prepoznavanju,
- talne obloge iz bambusa,
- laminate,
- proizvode iz rastlin, kot so aloe, plutovec ali kokos.

Ta evropski standard zajema talne obloge in parkete z barvo, lakom, voskom ali oljem oziroma brez njih.

SIST/TC TOP Toplotna upornost in topotna prehodnost

SIST EN ISO 6946

2017-09 **(pr)** **(sl)** **49 str. (SI)**

Gradbene komponente in gradbeni elementi - Toplotna upornost in topotna prehodnost - Računske metode (ISO 6946:2017)

Building components and building elements - Thermal resistance and thermal transmittance - Calculation methods (ISO 6946:2017)

Osnova: EN ISO 6946:2017

ICS: 91.060.01; 91.120.10

Ta dokument podaja metodo za računanje toplotne upornosti in toplotne prehodnosti gradbenih komponent in gradbenih elementov, razen vrat, oken in drugih zastekljenih enot, obešenih fasad, komponent, ki vključujejo prenos toplotne v tla, ter komponent, projektiranih za pretok zraka.

Računska metoda temelji na ustreznih projektnih toplotnih prevodnostih ali upornostih materialov in proizvodov za zadevne načine uporabe.

Metoda se uporablja za komponente in elemente, sestavljene iz toplotno homogenih slojev (ki lahko vključujejo zračne sloje).

Ta dokument podaja tudi približno metodo, ki se lahko uporablja za elemente z nehomogenimi sloji, vključno z vplivom kovinskih veznih elementov, na podlagi popravka iz dodatka F. Drugi primeri, pri katerih je toplotna izolacija premoščena s kovino, so zunaj področja uporabe tega dokumenta.

OPOMBA: Preglednica 1 v uvodu prikazuje relativni položaj tega dokumenta znotraj niza standardov EPB v kontekstu modularne strukture, kot je opredeljen v standardu ISO 52000-1.

SIST/TC VAZ Varovanje zdravja

SIST EN ISO 22870:2017

2017-02 (pr) (sl, en)

21 str. (SF)

Testiranje ob pacientu (POCT) - Zahteve za kakovost in kompetentnost (ISO 22870:2016)

Point-of-care testing (POCT) - Requirements for quality and competence (ISO 22870:2016)

Osnova: EN ISO 22870:2016

ICS: 03.120.10; 11.100.01

Ta dokument podaja posebne zahteve, ki se uporablajo za testiranje ob pacientu (POCT), in se uporablja skupaj s standardom ISO 15189. Zahteve tega dokumenta se uporablajo, kadar se POCT izvaja v bolnišnici, kliniki ali zdravstveni organizaciji, ki zagotavljajo ambulantno oskrbo. Ta dokument se lahko uporablja za transkutane meritve, analizo izdihanega zraka ter spremeljanje fizioloških parametrov in vivo.

Testiranje, ki ga pacient izvaja sam doma ali v skupnostih, ni vključeno, vendar so lahko nekateri deli tega dokumenta uporabni.

OPOMBA: Upoštevati je treba lokalne, regionalne in nacionalne predpise.
