**Organization :** ASI**Country :** Austria**Project ID :** 01049870/0001 Project Established**ICS :** 93.080.20**National Ref :** ÖNORM B 3585-2/A**Title :** Bituminous mixtures - Material specifications - Mastic asphalt - Part 2: Performance based requirements - Rules for the implementation of ÖNORM EN 13108-6 (Amendment)

**Scope :** This standard specifies the following selected requirements for mastic asphalt for use in the construction of roads, airfields and other traffic surfaces, in accordance with ÖNORM EN 13108-6, ÖNORM EN 13108-20 and ÖNORM EN 13108-21, due to the special geographical, topographical and climatic conditions prevailing in Austria. This standard has to be applied together with these standards. In order to cover the load situation in Austria, different types of mixes are defined in terms of mix composition and aggregate requirements. This document implements the performance-oriented requirements of ÖNORM EN 13108-6. NOTE: In Austria, a distinction is made between empirical and performance-oriented asphalt mix requirements. The asphalt mixture is assessed according to one of these two concepts with different test methods. Asphalt mixture manufacturers are given more degrees of freedom when designing asphalt mixtures according to the performance-oriented approach. The asphalt mix is stressed in the laboratory tests in such a way that it best reflects the combination of traffic and climate. Project-specific conditions can therefore be taken into account. Asphalt mix concepts according to the performance-oriented approach are preferably used for highly loaded traffic areas (e.g. motorways, air traffic areas).

Title : Technical qualification criteria and guidelines for handling and installation of cold bituminous mixtures for temporary and localized road repairs  
Scope : This standard specification provides technical qualification criteria for cold bituminous mixtures produced in the plant and workable in cold conditions, as well as guidelines for their proper handling and installation. These cold bituminous mixtures are intended for temporary and localized restoration of the regularity of deteriorated road infrastructure pavements and other traffic-prone areas; they are applied for safety purposes and in emergency conditions, while awaiting appropriate maintenance interventions. These cold bituminous mixtures have workability characteristics that are not dependent on the working temperature, and their mechanical performance evolves shortly after the completion of installation.

<b>Title :</b>	Halogen-free flexible cables with cross-linked elastomer insulation and reinforced cross-linked elastomer sheath with rated voltage 0,6/1 kV		
<b>Scope :</b>	This UNE standard establishes the construction, dimensions and testing requirements of flexible halogen-free power cables, with cross-linked elastomer insulation and reinforced cross-linked elastomer sheath, with rated voltage 0.6/1 kV for demanding services.		

These cables are intended for powering receiving or generating equipment, subjected to medium stress and in similar applications, where fire safety performance is required.

The cable covered by this standard is:

– DZ-F halogen-free cable without armour or screen, with flexible copper conductor.

a) Insulation material

The insulation considered in this UNE standard shall consist of an EPR or similar type compound according to Standard IEC 60502-1, tables 15 and 17.

b) Rated voltage

0.6/1kV; See UNE HD 603-1 Standard, subclause 2.3.

c) Maximum temperature for insulation

I) Normal service: 90 °C

II) Short circuit: 250 °C  
(5 s maximum duration)

d) Sheath material

It shall be appropriate for the maximum temperature of the conductor. It shall consist of a halogen-free elastomeric compound of type EM8 as shown in Standard UNE-EN 50363-6, table 2.
